DAVAO CENTRAL COLLEGE, INC.
ACSCU-ACI ACCREDITED
Juan dela Cruz St., Toril, Davao City

Course Title:	IR 1 Mind Education
Course Description:	The course aims to educate the hearts of people to learn the value of self-control and happiness, creating a much better environment in the class or workplace and building leaders with bright and clean hearts. The course provides students an opportunity to cultivate a mindset that overcomes one's limitations and frame of thought, challenging themselves and opening up infinite possibilities.
Units / Credits Equivalent:	3.0
Pre-Requisite:	None
Course Outcomes:	CO1: Conduct a seminar about how to nurture and cultivate the heart. CO2: Produce a portfolio of the accomplished case analyses.
Learning Outcomes:	
Competencies LO1: Explore how to nurture the heart and manage emotions effectively. LO2: Contribute to a culture that values work-life balance and mental health. LO3: Engage in self-reflection to assess personal growth and development. LO4: Cultivate a positive mindset and attitude towards challenges. LO5: Develop resilience and persistence in the face of setbacks.

IR 1 Mind Education
STUDY GUIDE
Unit 1: The World of the Heart
Chapter 1: Exploring the World of the Heart
Lesson 1: What is the World of the Heart

Introduction

This course examines the crucial significance of the heart, not merely as a physical organ, but as the emotional and spiritual nucleus of our existence. Similar to the acquisition of writing or reading skills, comprehending your heart necessitates recognition, education, and ongoing maintenance.

The heart is the center of happiness and serves as the repository for our profound, unarticulated feelings. It constitutes the basis of all significant aspects of existence. Neglected, akin to an uncultivated field, our heart may become desolate. To foster genuine happiness and development, we must deliberately prepare the ground, sow seeds of transformation, and nurture the emotional landscape.

This course will assist you in comprehending your heart's desires and how to cultivate it through basic yet impactful actions. Ultimately, you will possess the resources to nurture a heart that promotes joy, balance, and satisfaction. Let us commence the journey of discovery and transformation together.

Study Questions

1. What do you think is the importance of understanding the world of the heart?

2. What is the significance of "sowing seeds of growth" within one's heart? Provide actions that may promote personal development.

3. How can you apply the wisdom of the heart to improve relationships and decision-making in your everyday life?

Learning Objectives
LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Students will be able to learn how to reflect upon themselves;
- Understand the significance of the heart as both an emotional and spiritual center;
- Cultivate Self-Awareness; and
- Integrate Heart Wisdom into Daily Life

Key Concepts

Introduction to Mind Education

It is easy to hear about people who have achieved financial stability and outward success, yet are going through pain and misery in their hearts. On the other hand, there are people who have great difficulty in their lives but are able to enjoy hope, faith, and gratitude. The difference is found in the world of the heart.

This curriculum will cover topics and principles that will discuss the capacity for deep thinking, the art of heart-to-heart exchange, the value of meaningful connections with people, and how self-control can make life more productive and brighter. Mind Education was forged through decades and decades of real-life experience working with people in scores of different countries and cultures. The change this curriculum has had in the lives of people is both uplifting and expected. The content in this book is a culmination of sorts, an anthropology of insights and wisdom that has been pressure tested throughout multiple generations. Mind education is an extremely powerful thing: it can transform and elevate a person's life to unimaginable heights.

The World of the Flesh

We as people, are made up of two worlds: the world of our flesh and the world of our heart. The **word of the flesh are all the principles, patterns, and rules that are influenced by the demands of the physical body.** Our flesh consists of the five senses, desires, and sensations felt by our physical bodies.

The flesh is the physical of a person and all of its affiliated demands and desires. One's nature, character, emotion, thoughts, mentality, and feelings comprise the world of the heart. The invisible world of the heart powers the decision-making and direction-setting processes that govern the world of the flesh.

The power of a trained heart

Just like a healthy heart is essential to keeping our bodies in peak condition, a healthy world of the heart opens us up to happiness, joy and fulfillment. When it's healthy, the world of the heart is open for advice and guidance, maintains flexibility during unexpected turn of events, and stays resilient through trying times and moments of adversity.

Things like exercise and the right diet are ways to discipline the physical heart in order to get the most of it. Likewise, when we properly train and condition the world of the heart, it can serve us in so many dynamic ways.

Learning Resources

The founder of International Youth Fellowship, Dr. Ock Soo Park, authored the book that made this curriculum possible titled ***Mind Education: Principles and Case Studies***.

Discussion Questions

Discuss the importance of Wi-Fi and how our lives and world would be different without it. Then complete the chart with two other things that are invisible but hold a lot value in our lives.

Something that is invisible but does not exist	**Why is it important in our lives?**	**What would happen in our lives without it?**
Wi-fi

	Year:	
	Date Submitted:	

ACTIVITY: Put check to a box to where your heart is leading you right now. How well do you know your heart?

5 ALWAYS 4 OFTEN 3 SOMETIMES 2 RARELY 1 NEVER

Checking My Heart	5	4	3	2	1
I ask advice often.					
It's easy for me to start a conversation with someone I don't know.					
I value my mentors in life and try to learn from them.					
I have real connections with many people around me.					
It is not hard for me to trust others.					
I reveal my true heart despite the fear of judgment.					
In conversations, I listen to really understand the heart of the person I am speaking with.					
I embrace chances for me to challenge myself.					
When I am going through challenges in my life, I often try to seek advice.					
I do not let anger or fear get the best of me in a way that affects my life or relationships with others.					

Now count up the points. If you scored above a 30, you are living life with a healthy state of heart if you scored above a 45, you are a 'heart' Rockstar. After finding out the result, answer the questions below.

1. What are some of the features of the heart that you learned from the lesson that you did not know before?
   _____
   _____
   _____
   _____.

2. How do you hope to gain knowledge about the world of the heart? Please reference the lesson and also the heart check-up from the above survey.
   _____
   _____
   _____
   _____.

WEEK 1	A blueprint for despair and blueprint for hope.

ASSESSMENT: John and Trevor experienced bullying at school while in the 7th and 8th grade. Read the cases carefully and answer the questions on the blank provided.

John decided that it's not worth it to try to make friends. He thought that it's better to tell anyone and to isolate himself. He is now in the 12th grade and keeps to himself even when others try to build friendship with him.

Trevor made it through the 7th and 8th grade scared, frustrated, depressed, and full of anxiety. He began to realize that those who abused him were not real friends, and that one day he would be around people who care about him. He decided to talk to his mom and to the counselor at school. With their help, he made it through the middle school. Although the bullying didn't completely end, he learned how to overcome. It wasn't easy. He spent many days crying by himself and there were many times he wanted to give up but still he entered high school with new heart. He decided that he deserved healthy friendships and was hopeful that one day he would have good friends. He was not going to make his horrible 7th and 8th grade experience ruins his life. That would mean his abusers would keep winning, even when they no longer come into contact with hi. Right now, he is in the 12th grade getting ready to graduate with true friends by his side.

1. Let's think about John's blueprint for his life of isolating himself and trying not to make friends because of his experience in middle school. What does the future look like for John if he continues with this mindset?

   _____
   _____
   _____
   _____
   _____.

2. What does the future look like for Trevor, knowing that he thought deeply about how he was going to fight through the difficulties?

   _____
   _____
   _____
   _____
   _____.

_____
_____.

Summary

People are made up of two worlds: the world of the flesh and the world of the heart. The flesh consists of physical sensations, desires, and the five senses, while the heart encompasses one's nature, emotions, thoughts, and mentality, guiding decision-making. A well-trained heart is crucial for happiness, resilience, and adaptability in life. Just as exercise and diet strengthen the physical heart, discipline and conditioning of the heart's world help individuals navigate challenges and find fulfillment.

Unit 1: The World of the Heart
Chapter 1: Exploring the World of the Heart
Lesson 2: The Heart and the Body

Introduction

We all eventually grow older and mature into adults. But what happens when the body grows up but the heart doesn't? Recently, we have seen an increase of adults identified by psychologists as having "Peter Pan Syndrome"
Just like how Peter Pan can never grow old in Neverland, some adults have yet to "grow up" in their minds, fail to get a job to support themselves, and are unable to raise a family. They instead live with a caretaker who supports them, usually their parents. Experts note that many of these adults suffer from anxiety, loneliness, fear of commitment, and even a narcissistic personality, all which prevent them from reaching mental adulthood.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

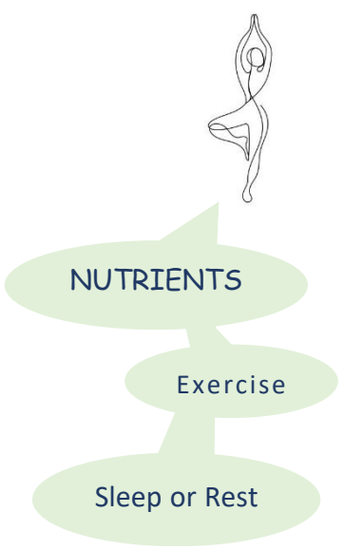
Intended Learning Outcomes

- Students will be able to identify the differences between the heart and the body;
- Identify the limitations of the heart and the body; and
- Perceive how the heart decides happiness more than the body.

Key Concepts

The Heart and the Body

The healthy heart is filled with peace and happiness, love, gratitude, hope, and other positive thoughts and emotions. Because many people do not know how to keep their hearts healthy, they live with a ***sick heart,*** often full of complaints, bitterness, misery, and despair. However, through practicing the three things that keep the world of the heart healthy, we can enjoy our lives and fulfill our potential. Chasing our dreams and achieving our goals are easier with a healthy, fortified world of the heart because of the newfound perspective, strength, and hope we gain.



The Heart Decides Happiness and Thankfulness

People do not become miserable because of the situation they are in or the conditions they are dealing with. When misery enters their heart, they become miserable because they don't know how to get rid of it. They might try to forget about their misery by pleasing their bodies. However, it is impossible to solve the problems of the heart by using the same methods that may momentarily satisfy the body.

Learning Resources

The founder of International Youth Fellowship, Dr. Ock Soo Park, authored the book that made this curriculum possible titled ***Mind Education: Principles and Case Studies***.

WEEK 2	Think-Write-Share

ASSESSMENT: Our bodies are bound by physical location and the tangible world. However, the world of the heart is not bound by the physical. It has the amazing ability to transcend time and space, travelling to the past and to the future, and thus affecting our lives in transformative ways.

Directions: When your heart moves in a particular direction, your body follows. Think about a situation that you are experiencing right now. It can pertain to your physical body, mental health, or difficulties in your heart.

What are you struggling with?	SITUATION

What's in your heart? What are you thinking and how are you feeling about this situation?	HEART

OUTCOME

Based on what's in your heart, what is the likely outcome?
Are you contented with that outcome? Why or why not?
Where does your heart need to be to have the healthiest outcome?

Summary

The passage emphasizes the significance of preserving a healthy heart, which is characterized by positive emotions such as gratitude, love, hope, and serenity. Numerous individuals contend with a "sick heart" that is replete with negativity, which has an adverse effect on their overall health. One can cultivate a healthy heart and lead a fulfilling existence by adhering to three fundamental principles. The heart is the determining factor in the determination of happiness and gratitude, rather than external circumstances. Although individuals may attempt to divert their attention with physical comforts, genuine emotional restoration necessitates directly addressing the heart, as the body's methods are incapable of resolving the heart's issues.

Unit 1: The World of the Heart
Chapter 2: The Mechanism of Thoughts
Lesson 1: Thoughts Sown in the Field of the Heart

Introduction

Here's a funny proposition-let's think about thoughts. No, that's not a typo, that's the frame we need for this very important lesson. We need to be able to manage our thoughts every day because any one thought that gets planted, nurtured, and cultivated becomes a tangible action. Actions can either be productive or destructive, based on the "seed" of the thought that is planted in the field of the heart. The field of the heart is an understanding of the world of the heart with thoughts as seeds that are planted within the heart to grow and occupy the heart in either a helpful or harmful way.
And secondly, the sheer number of thoughts we have every day would drive us insane if we listened intently to them all.
Dr.Jorden Poppenk and his student,Julie Tseng, of Queens University in Canada, published a 2020 study that revealed we have 6000+ individual thoughts each day. That means we have roughly 7 thoughts per minute if we stay awake for 16 hours. 7 thoughts equate to 7 seeds that can turn into actions. Any one of them could have a positive or negative effect.
Thoughts are powerful things, just like miniscule seeds that sprout into gigantic redwoods when they're properly nurtured. It is essential that we distinguish a thought left to its own devices, versus a thought that is managed, versus a thought that is discarded. Being able to take proactive care of our own thinking matures the world of the heart-we develop the ability to accept or deny thoughts at will through a clear understanding of whether they are helpful or destructive.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Understand the process of how thoughts get planted in the heart
- Realize the impact an idea planted in our heart has on our life
- Discover how the thoughts that arise dominate the physical body

Key Concepts

Thoughts, like Turtle Eggs Left on the Shoreline to Hatch

Two or three months after a sea turtle lays its eggs on the beach, baby turtles hatch from them and crawl out onto the sand and head for the ocean. Along the way, some of them are snatched by seagulls, or gobbled up by lizards. Some of the babies may avoid these obstacles and reach the ocean, but even then, they are in danger. They face other predators that hunt them. Only about 1 in 1,000 of the hatched egg grows into an adult turtle.

The same can be said for the thoughts that grow inside of our hearts. Not every thought that arises in us brings forth fruit. The thoughts of wanting to be pretty, the thoughts of wanting to make money, wanting to live well, wanting to eat, wanting to talk to people, the thoughts of wanting to fall in love… many thoughts come and go, countless time over.

Many thoughts arise inside of the heart and go through the same process as that of sea turtle eggs.

Course:	
Year:	
Date Submitted:	

ASSESSMENT: As we live our lives, we have many thoughts that drag us. Some thoughts are positive and some are negative. Think about thoughts that are dragging you right now, either by situations that happened in the past or are currently happening to you. Let's go through that process.

Directions: Just fill in the box.

Example: **I think I am a burden to people**	**If that's the case, I think isolating myself is what people would want.**	**Everyone will be better off without me.**	**I really want to share something but I think I cause too much trouble.**

Reflection: What was the outcome of those thoughts created in you?

Thoughts	Happiness	Gratitude	Sadness	Anger
Ex: I think I'm a burden to people			✓	✓

Unit 1: The World of the Heart
Chapter 2: The Mechanism of Thoughts
Lesson 2: The Path of the Heart

Introduction

It is a wonderful thing to witness two people fall in love, get married, and start a family. However, the rate of divorce is steadily on the rise, and many children are finding themselves in single-parent households. We hear stories about how couples go through struggles and how their relationships become rocky as they live together for a long time. Marital strife usually rears its ugly head when either the husband or wife thinks that they are better than their significant other in some way, in a lot of ways, or in every way. This often leads to conflict. A husband will begin to resent his spouse when he focuses on her mistakes and his “correct” actions. And a wife will pick fights with her husband when she does the same.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Understand the reasons why people get into conflicts with each other
- Explain why the heart of self–trust forms and the process that the heart flows in
- Discover which of the six steps in this lesson your heart is currently located in

Key Concepts

Types of Heart that Creates Problem for Us.

A creek flows into a stream, and streams merge to become a river, which eventually spills into the ocean. The heart also flows along a path. The path of the heart is the layout of a person’s heart that decides which types of thoughts their minds will follow and thus, the type of behavior they will exhibit. The heart has a path, a course that it takes and it flows along. Understanding this path and finding out where we are on it is key to further understanding the world of the heart and avoiding the pain of failure, among other types of pain we might experience.

1. **How we start to believe in ourselves**

   Napoleon Bonaparte's self-confidence emerged from a confluence of personal adversities, military successes, and ambition. Born in Corsica to a family of modest nobility, he had difficulties from an early age, including discrimination in mainland France. His resolve and cognitive abilities enabled him to thrive in military academies, ultimately advancing through the ranks. Crucial events, including his triumph at the Siege of Toulon and his command throughout the Egyptian war, reinforced his self-assurance. At the time of the 1799 Coup of 18 Brumaire, which elevated him to power, Napoleon was certain of his destiny to guide France to grandeur. His military triumphs, charisma, and strategic acumen further solidified this conviction, transforming him into a leader with unwavering self-confidence.

   We don’t have a measuring tape for the heart because it can’t be seen with the eyes. There is also no unit of measurement or gauge to display our level of arrogance of humility. But when our heart becomes high and we begin to believe in ourselves too much, we will fall at some point, and it will be self-inflicted.

2. Negligence from Arrogance

Napoleon's hubris and overconfidence occasionally resulted in neglect, particularly during his later years. His burgeoning sense of invulnerability, propelled by his myriad triumphs, led him to misjudge the obstacles he encountered. A significant instance of this was his choice to attack Russia in 1812. Notwithstanding his advisors' cautions on the severe winter and logistical challenges, Napoleon remained certain that his army's prowess would surmount any impediment. His hubris caused him to misjudge the Russian strategy of retreat and scorched-earth tactics, rendering his force susceptible. The campaign concluded in catastrophe, resulting in a significant loss of personnel and resources. Moreover, his hubris rendered him unwilling to heed the advice of others, resulting in his alienation from essential guidance and culminating in significant errors in military and political judgments. This neglect, arising from his conviction of infallibility, finally led to his demise.

3. Failure

Napoleon's 1812 incursion into Russia became one of his most significant setbacks. The Grand Army, with over 600,000 soldiers, encountered significant obstacles during the campaign, such as famine, severe winter conditions, and persistent Russian strategies. The Russians employed a scorched-earth strategy, obliterating supplies and food sources throughout their retreat, so rendering Napoleon’s army susceptible.

When the French were compelled to withdraw, Napoleon had suffered the loss of nearly 400,000 soldiers owing to famine, extreme weather, sickness, and assaults by Russian troops. The Russian army, accompanied by partisans and Cossack cavalry, relentlessly tormented Napoleon's retreating troops, exacerbating his losses. Approximately 100,000 soldiers survived the campaign, a catastrophic loss that signified the onset of his collapse.

4. Pain and Misery

After Napoleon's terrible loss at Waterloo, he was compelled to abdicate for the second time. He was devastated by his defeat and the end of his rule. After surrendering, he was sent to Saint Helena, a British-controlled island in the South Atlantic Ocean distant from Europe. The island's seclusion, his tremendous sense of loss, and the harsh knowledge that his aspirations of European dominance were over caused him immense psychological suffering.

Napoleon suffered physically and emotionally in exile. He resided in a small, modest residence under British security and lacked the comforts he had enjoyed as emperor. His health declined, and loneliness and terrible conditions made him suffer. After commanding massive armies and ruling much of Europe, the once-mighty leader was now a prisoner of his aspirations. He suffered from despair and missed his former splendor. Napoleon’s later years on Saint Helena were filled with reflections on his failures, and his death in 1821, possibly from stomach cancer, was the final chapter in his sad fall from power.

5. Remorse

Napoleon's sorrow may have surfaced during his exile on Saint Helena after Waterloo. Napoleon was ambitious and believed in his destiny, thus he rarely regretted his acts. He became more introspective and apologetic after losing power. Napoleon regretted several of his actions on Saint Helena, including those that brought him down. He expressed deep regret about the Russian campaign of 1812, acknowledging the dire implications of invading Russia. He called it "the most disastrous campaign" of his life.

Napoleon also regretted his conflicts' human toll, notably his soldiers' deaths. He considered the misery and deaths caused by his desire and the terrible campaign

conditions, such as the extreme losses in Russia and Spain. In his meetings with Saint Helena exiles, he sometimes voiced a yearning for peace and was saddened by his battles' massive toll on Europe. Though remorseful, Napoleon never abandoned his trust in destiny or rationalized his conduct, even in his reflections. His regret seemed to reflect the practical effects of his decisions more than moral wrongdoing.

6. Happiness

Napoleon would have felt his foolishness and become regretful of his arrogance. He could have lived happy, quiet life with his family on Elba while still enjoying some level of respect and admiration.

Learning Resources

Course:	
Year:	
Date Submitted:	

ASSESSMENT: Check all that applies. As you read your statement, underline the thought and circle action. For the statements in the shaded area, please write the thought that you think a person needs to believe in order to engage in the stated behavior.

Check all that applies.	✓
I get very upset when I hear things that I don't want to hear. Even though this happens, when someone points this about me, I don't want to admit it's true	
I feel that I need to always be the center of attention so I work hard to make sure I am keeping people interested in me.	
I think it is really important to be honest and it is really hard for me to hold back from saying what I am feeling. There have been times when my careless words hurt people's feelings or made the atmosphere awkward.	
It seems that there is no one who understands my heart so I don't fully share my heart with anyone.	
I am confident but I hear people say that I am selfish, self-assertive, and have a strong personality.	
I am usually a really good test-taker so I have boasted about it to my classmates saying, "I did well to the test," but then later found out that I had done poorly and I am embarrassed.	
The compliments I receive, though very rare, makes me very special. They do not leave my head easily.	
I struggle because, trusting my memory, I don't take notes and I ended up asking my friends for help.	
I get overwhelmed easily so I avoid tasks that are beyond my capabilities.	
When others make accomplishments, I think to myself saying, "It's because I haven't tried. If I wanted to, I could…"	
When an unfamiliar topic comes up during a conversation with my classmates, I pretend to know and continue on with the conversation.	
I often hear that I have a hostile personality.	
My emotional ups and downs are severe.	
I often blame others for the cause of my wrongdoings of problems.	

Oftentimes, I have one-sided thoughts like, “That person hates me,” and cause misunderstandings.	
During class group activities, I stubbornly assert my opinion creating conflict with the team members.	

Count up how many boxes you checked.

THE BEST OF THE BUNCH	**0-5**	**You are well to developing the heart of a future leader!** Your blueprint takes many views into perspective. Your thoughts guide you to understand the opinions and positions of others, even when they are your opponents. Nevertheless, you should not make rash conclusions and say, “This is good enough.” To be a true leader, it does not only require great abilities and qualities, but also an open mind and wisdom to think and ask yourself, “Could what I know be wrong?”
INDIFFERENT	**6-10**	**Slowdown and think about the force that’s guiding your heart.** Trash that blueprint and get a new one that will allow you to build a firm foundation and stabilize everything with a little dose of humility. You are on a shaky ground. You may consider yourself to be okay. Over confidence develops from a self-centered heart and makes you become isolated. Eventually, isolation can only cause problem because it caused fixed thinking. As you learn about the world of the heart, you will receive the reinforcement that you need.
SELF-CENTERED	**11-15**	**Stop! You can’t, right?** It is because you are being dragged. The earth is quaking and you are building yourself up so high. A big problem is likely to be in front of you. Take time to earnestly look back on your past. For example, has the distance between you and your friend grow further apart because you could not say sorry? Perhaps you look down on others. Surely there are many people around you that dislike you. And have wounds in their hearts because of you. That dislike you and have wounds in their hearts because of you. You need a new blueprint fast.

Unit 1: The World of the Heart
Chapter 3: The Mind that Creates Problem and Misery
Lesson 1: Aspects of Modern Society that Weaken the Mind

Introduction

The quest for convenience, the rush for instant gratification, the desire to make things easier on ourselves…these "goals" have taken us to new technological heights and never a day goes by when we're not hit with another innovation that will change how we behave and function. Computers are more powerful, the internet is quicker, there's a gadget and app for every need, and our banking, entertainment, and work are all facilitated through our smart devices–our fingertips carry their weight in gold.
But with ease and comfort comes complacency, along with an insatiable appetite that sets up for a despair that deepens as our "Fear of Missing Out" (FOMO) grows. Sure, we're better connected with fiber optics, Wi–Fi signals, and satellites but we are the most isolated we're ever been. Now is the time where we must pull over off the highway of information and assess the strength of our hearts, from the inside and out.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Identify the three traits of modern society that produce a weak heart
- Explore the reasons why these three traits weaken people's hearts

Key Concepts

Unhealthy Competition: The Endless and Exhausting Rat Race

Everyone wants recognition, acclaim, and praise from others. To do so, they have to work hard and produce results that are acknowledgement-worthy. Despite the apparent obsession with the concept of equality, the fundamental flaw in human nature is the constant desire to surpass others and maintain a sense of achievement. This mindset permeates every corner of civilization: social media has become a virtual billboard that shows the highlight reel of one's life, music artists and celebrities regularly boast about their preeminence, and companies promise that if anyone buys their product, they will become the envy of their friends and family.

Healthy competition has bred mutual distrust and dishonesty. For example, people fear others will despise them if they try to be honest about their shortcomings and flaws. Therefore, everyone feels the need to seem great, intelligent, and well-off. Many people are afraid to reveal what's inside of their hearts. This constant facade generates anxiety as people maintain their social disguise. In the other hand, if someone thinks, "I am better than others," they become arrogant. That person then starts to despise and belittle others, believing their thoughts are the most correct. They live only according to their ideas and see things only from their perspectives, never willing to compromise and make adjustments based on what others have to say.

That is why this world is becoming more and more heartless and why it is proving more challenging to establish and manage human relationships.

WEEK 5	Discussion Questions

DCC WORKSHEET	**Course Title:**	**IR 1 Mind Education**
	Instructor:	***JIN EUN KIM***
	Student Name:	
	Course:	
	Year:	
	Date Submitted:	
ASSESSMENT: Wouldn't you agree that the ideal purpose of technology is to free up time for meaningful conversations? But the reality is that we spend the time saved by the technology on technology that mindlessly entertains us.		

Directions. Answer on the blank provided.

1. **Rampant Competition:** Everyone has flaws but we try to hide them because we are trying to present the best version of ourselves. But for our hearts to rest, who is the person that you can trust to speak about your flaws?

   _____
   _____
   _____
   _____.

2. **Convenience:** List three ways your life has become more convenient.
   (i.e.: food delivery services, not having to meet with anyone)

   _____
   _____
   _____
   _____.

3. **Overcomplication:** What does your daily schedule look like from the moment you wake up?

   _____
   _____
   _____
   _____.

4. During your spare time, what do you do? Do you think your time is spent wisely? Why or why not?

   _____
   _____
   _____
   _____.

WEEK 5	**Level of Thoughts**

DCC WORKSHEET

Course Title:	**IR 1 Mind Education**
Instructor:	***JIN EUN KIM***
Student Name:	
Course:	
Year:	
Date Submitted:	

ASSESSMENT: We have to think past our first thought! Let's practice deep thinking by evolving your "First Level of Thoughts" into "Second Level of Thoughts"

Directions. In the blank spaces provided, please fill in your first and second levels of thought and the results of following each one.

Situation	**First Level of Thoughts**	**Result**
You are playing video games until late at night.	Why is my device the first thing that always gets taken away? I'm not sleepy at night that's why I use it.	
	Second Level of Thoughts	**Result**

Situation	**First Level of Thoughts**	**Result**
Not being able to stay out late with your friends.		
	Second Level of Thoughts	**Result**

Situation	First Level of Thoughts	Result
When you go to the store, there are so many things around you that you want. You know, sometimes people steal and get away with it. So you've made up your mind to steal just a little bit of something you like.		
	Second Level of Thoughts	**Result**

Now think about a situation in your life and practice moving through the levels of thought.

Situation	First Level of Thoughts	Result
	Second Level of Thoughts	**Result**

Unit 1: The World of the Heart
Chapter 3: The Mind that Creates Problem and Misery
Lesson 2: Thoughts that drag you to distraction

Introduction

A mirage is an optical illusion, a reflection of light that tricks the mind into seeing a solid thing when there's nothing there at all. An exhausted person who crosses a desert will see an imaginary oasis in front of them. Why? Because they yearn for one to appear. That person pursues the oasis because it feels attainable, as if it were a short walk away. "I'm almost there," they think. But no matter how long they press forward, the mirage maintains the same distance. The person who follows this mirage will get lost and eventually die.
Why are we talking about mirage? Because to understand a mirage is to understand how our thoughts can overpower us. If our minds flow in one direction. We are unable to have a comprehensive understanding of a subject, and we will not be able to make sound, accurate judgments. Effective decision-making requires us to think things through, step by step.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Understand how negative thoughts affect our lives, from the inside out
- Recognize the invisible force that lead us to a state of unhappiness
- Understand how self-belief negatively impacts us

Key Concepts

The one thing to know is that a certain power drags us all along.

Everyone of us wants to live in peace and in happiness. The question is why does sadness of misery infiltrate our lives when our goals are positive? If we take a glance at life, it seems that humans are the root of pain ad tragedy. For example, humans cause hysteria. Start wars, and are ruthless in the pursuit of "more".

However, a closer look will reveal that a destructive force drags around the hearts of human beings. And people often fall into darkness and misery from this phenomenon without realizing it.

Let's call this destructive force, "the destructive voice." The destructive voice feeds us negative thoughts even though we do not ask for them. If we think about it, no one asks for negative thoughts like sadness, despair, and anger. These negative thoughts sometime ensnare us and drag us to do things that are not helpful to us or to others.

The huge detriment that stems from self-belief

We all want to become great. We want our accomplishments revealed and recognized. And we tend to consider ourselves wise and smart. This makes us proud of ourselves even though we may not express it to others.

Whether is it improving at playing piano or becoming fluent in English, we take accomplishments like these and magnify them. We develop self-image of greatness.

WEEK 5	So many things to break, so little time…

DCC WORKSHEET

Course Title:	**IR 1 Mind Education**
Instructor:	***JIN EUN KIM***
Student Name:	
Course:	
Year:	
Date Submitted:	

ASSESSMENT: Have you ever heard of the term "bull in china shop"? It refers to a person who breaks things or who often makes mistakes or causes damage in situations that require careful thinking.
Living a happy life means living a life in which we think carefully and deeply. Like a bull in a china shop, if we do not think deeply and we stay in the first level of thought, we can only move forward asserting our opinion, thinking we are right and harming ourselves and those around us.

Directions. Complete the chart below. Think about how the situation unfolded when you followed your first thought and thought you were right.

Then think about how you could have thought more deeply to consider more than your own viewpoint of the situation.

List the thoughts you had in your "bull in a china shop" situation.	What was the result of moving forward with these thoughts?	How did you find out you were wrong?	Knowing what you know now, how could you have thought differently?

Unit 1: The World of the Heart
Chapter 4: The Power of the Mind
Lesson 1: Healthy heart flows

Introduction

In Israel, the Jordan River starts from Mount Hermon in the North and runs into the Sea of Galilee, and it ultimately flows into the Dead Sea. The same river passes through both seas, but these seas are completely different.
The Sea of Galilee hosts a wide variety of fish and the adjacent land is very fertile, so there is an abundance of vegetation and wildlife. The Sea of Galilee's water itself is pristine and clear. On the other hand, the salt level in the Dead Sea is 10 times saltier than seawater. It has the highest salt concentration in the world and is utterly uninhabitable.
The Sea of Galilee receives its clean water from the Jordan River and continuously expels water out–it carries the minerals from the surrounding rocks into the Dead Sea. However, the minerals become trapped due to lack of water flow at the Dead Sea. Stagnation creates extremely high salt concentration, and true to its name, the Dead Sea is literally a sea void of life.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Explain how the heart needs to flow to be healthy
- Identify how a person can direct their hearts to flow into those of other people
- Become aware of the negative consequences of a heart that does not flow

Key Concepts

TRUST: THE ELECTRICAL CABLE OF THE HEART

The essential function of the heart is that it can flow with other hearts. When people open up and have conversations, they can feel each other's hearts-their hearts become one. The heart flow is the process of the heart to have its thoughts, emotions, and beliefs transfer into another person's heart and vice versa.

For example, when we open up and speak to a person, they will also open their heart to us. That is when hearts flow together. The other person can rejoice and then that heart flows in return. When the other person is sad, that sadness flows in, too. A relationship built on the exchange of heart forms a bond of trust.

We can also compare the flow of the heart with electrical lines. Electricity flows through electrical cables. Electricity can power a home as long as the lines are connected. A connected line of power means we can run the washing machine, turn on the air conditioning, and light up any room in the house. A life without electricity would prove incredibly challenging-we would have to wash our clothes by hand, cool ourselves manually, and even burn candles or oil lamps for light.

WEEK 6	Heart check-up

DCC WORKSHEET	**Course Title:**	**IR 1 Mind Education**
	Instructor:	***JIN EUN KIM***
	Student Name:	
	Course:	
	Year:	
	Date Submitted:	
ASSESSMENT: Let us check how healthy your heart is!		

Directions. Complete the chart below. Think about how the situation unfolded when you followed your first thought and thought you were right.

Then think about how you could have thought more deeply to consider more than your own viewpoint of the situation.

Items	1	2	3
1. Suppose you are failing your math class. Your parents ask you how your schoolwork is going. What do you say?	Fine-doing okay.	I need to bring up a few grades but nothing to worry about.	I'm having a hard time in my math class, and I don't know what to do.
2. Suppose you hear that your bestfriend said something hurtful about you to another student. When your friend approaches you, not knowing you heard anything, you…	Pretend nothing happened and speak normally	Act standoff-ish but wait to see what your friend says or does	Speak directly. Tell them what you heard and ask if it's true.
3. You find out your grandmother who you are close to is very sick, and you are worried about it. Your teacher asks if everything is ok. How do you respond?	Yes. I'm fine	Thanks for asking, but I'd rather not talk about it.	Well, I have been worried about my sick grandmother, so it's been hard to focus in class.
4. Your friends are having a party and you knew there would be alcohol. You didn't tell your parents because you they wouldn't approve. Now, it's to go home and your driver is drunk. There are no taxis available. You will …	Just get in the car and hope to get home safely	Ask everyone else in the party. It's not a good idea to tell your parents.	Call your parents and ask them to please pick you up. They will be upset, but they will help you out.

5. You are going out with your friends, and you have to be home by 10PM, but all your friends are allowed to stay out until midnight. You are sick of always having to come home early and miss out on quality time with your friends. You answer:	Nothing. You just go to your room. Even if you explain, she won't understand.	"What do you think? Everyone is at the party and I'm the only one home this early."	"Mom it really upsets me that I always have to come home early. I know you made that rule because you care about me, but I wish you understand."

Now add up your points: **A= 1 B= 2 C= 3**

If you scored 13-15	Your heart is pretty healthy! It seems that you are able to express your heart freely to all or most of the important people in your life. Keep up the healthy heart flow for a happy life!
If you scored 9-12	You have some healthy relationships, but there are some blockages in your flow. Pinpoint where the blocked points are and begin the flow!
If you scored 5-8	Beware! Your heart is very unhealthy. Many things are blocking your heart and your heart needs to start flowing now!

Let's take a look at how each of the 5 questions were answered. Remember that trust is the channel through which the heart flows. How much do you trust the following people? Rate your trust for each of them on a scale of 1-10 (1 being no trust, 10 being ultimate trust)

a. Caregiver (discuss questions 1, 4, and 5) _____
b. Friends (discuss question 2) _____
c. Teachers (discuss question 3) _____

Unit 1: The World of the Heart
Chapter 4: The Power of the Mind
Lesson 2: Strong Hearts Grow

Introduction

Do you know how to get bigger muscles? When you exert your muscles through physical activities, they become stressed. This resistance creates micro–tears within the muscle fibers. The body responds by quickly repairing the damage caused by the tears. When mended, the muscle fibers become slightly larger due to hypertrophy. which means that a part of the body has grown bigger because its cells have increased in size. Muscles grow because the body adapts to the workout or the person's weight lifting regimen.
Interestingly, muscle fibers have to tear to experience growth. Only strenuous exercise can make this happen. Moving around naturally, such as walking or holding lightweight objects, will not develop our muscles (or the simple fact that such activities do not provide enough stress to our muscles to make a tear. The body has to endure an increased resistance level, or the muscles will shrink because of atrophy, which is the degeneration of cells.S
Also, even if we exercise our muscles the same way every time, we will not experience as efficient gains as when we first started because our muscles will have been accustomed to that stress level, in other words, we have to find a way to “damage” our muscles through varied, more strenuous exercises. Constantly exposing our muscles to workouts that they are uncomfortable with is the key to growing them.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Explain why the heart needs to grow to be strong
- Identify in what ways the heart can grow
- Understand the negative consequences of a heart that does not grow

Key Concepts

DONGING BURDENS

Everyone wants to avoid burdens, not just weak-hearted people. However, immature people practice avoiding burdensome tasks or challenges. The habit of dodging arduous tasks takes over every aspect of their lives.

For example, some people only like to hang out with others who are not as smart or attractive. They want the company of people who cannot challenge their decisions or thoughts. Also, they tend to surrender in the face of a seemingly insurmountable difficulty.

Some people avoid entering a new relationship after a divorce or a break-up. Some people then focus their hearts on pets like cats and dogs. Cats and dogs are more intelligent compared with other animals. However, they're not as bright as people. These animals don't make tedious requests of their owners. If you feed them on time and pet them, they're satisfied. They don't ask why you're frowning at them. They don't ask why you came home late. There are people who live with only cats and dogs because they crave care and affection, but want to avoid dealing with the challenging aspect of human relationships.

WEEK 6	Heart check-up

DCC WORKSHEET	**Course Title:**	**IR 1 Mind Education**
	Instructor:	***JIN EUN KIM***
	Student Name:	
	Course:	
	Year:	
	Date Submitted:	

ASSESSMENT: Whenever there is a challenge or difficulty, you have two ways to respond – fight (face the challenge and overcome it) or Flight (avoid the challenge, run away from it or give up).

Directions. Read the each of the scenarios together as a group or with your class and come up with a fight response and a flight response for each.

	FIGHT	FLIGHT
A big test for a subject that's really hard.		
Running in a big track meet and you're the slowest on your team.		
Rumors/problems with friends		
Being harassed / bullied by kids at school or on social media		

Unit 1: The World of the Heart
Chapter 4: The Power of the Mind
Lesson 3: The Field of the Heart

Introduction

Another effective way to describe the world of the heartis to liken it to a field. A piece of land may be good if it's cared for, but it will be covered in weeds and garbage if it goes neglected.
That is why the farmer plows the land to till it before planting seeds. Thefarmer takes the plow, upends the soil, and makes round clusters of dirt. Basically, he lifts the top layer of ground slightly into the air. As the clusters of dirt float in the air, they are cut off from the moisture that rises from the ground. The clusters completely dry and soak up sunlight. Neither weeds nor plants can live in these clusters if the farmer takes these crucial steps to till the land.
The farmer crushes the dirt clusters, mixes in nutrients that benefit the soil, and plants an assortment of crops. Nothing surfaces within the first week of seeding. It's impossible to tell whether a piece of land has seeds in it at first, but after a week, identical sprouts emerge through the soil, and they grow together. It is beautiful to see these seeds rise in unison.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Explain the heart as a field and the importance of tilling that field
- Accept the need for a tiller for our hearts

Key Concepts

WE NEED TO TILL OUR HEARTS LIKE FARMERS TILL THEIR FIELDS

A nice house or a good car is not an indicator of success. A loaded savings account or rapid career growth doesn't necessarily breed happiness, either. Without a proper tilling of the heart, it doesn't matter if we make a lot of money, live in a nice house, drive a fancy car, or get married to a lovely person-it can all collapse overnight. Unfortunately, people study hard and gain lots of knowledge, but often do not take the time to till their hearts.

Some people till their hearts, but many do not. If we let the unhealthy soil and weeds remain in the field of our hearts, we may not be able to tell the difference under ordinary circumstances. However, people who have not tilled their hearts cannot easily escape hardships. They are unable to rid themselves of certain friction or negative thoughts that stubbornly go unresolved. That's why there are people with handsome or pretty faces, nice personalities, and educated minds who ironically live pitiful lives.

Can a field till its own soil? Of course not! It needs a capable farmer. We can attempt to create, or at least hope to possess a tilled heart, but this is very difficult to achieve without our farmer; in other words, the mentor, guide, and/or figure of support in our life.

- We are often unable to see ourselves, so we remain unaware of the fact that weeds (negative thoughts) are growing in our hearts. But if we have a "farmer," He or she can assess our heart and treat us appropriately.
- Sometimes, our hearts become complacent-that's when the farmer needs to challenge us. Our hearts can also harden, which is when the farmer needs to soften it with nutrients of hope.
- Regardless of the problems within the field of our hearts, a managing farmer can farm the field to produce an abundance of wonderful crops of the heart.

WEEK 6	Remembering the Good Old Days

DCC WORKSHEET

Course Title:	**IR 1 Mind Education**
Instructor:	***JIN EUN KIM***
Student Name:	
Course:	
Year:	
Date Submitted:	

ASSESSMENT: Think back when you were ten years old. Suppose you were left home alone for three days. There was no one around to tell you what to do.

Directions. Answer the following questions accordingly.

Question	Answer	Immediate Result	Long-Term Result
What would you eat?			
Would you brush your teeth?			
Would you clean up after yourself?			
Would you take a shower?			
What time would you go to bed?			
How long would you spend watching TV?			
How long would you play computer games?			
What would you try to do that your mother never let you do?			

Now, fast forward to the present. Think about your current situation. You still have people around you to interfere with you regarding certain aspects of your life.

Unit 2: Self Control
Chapter 1: Desire
Lesson 1: What is Desire and Nature

Introduction

The topic of “desire" is a broad one. It can be defined in several different ways. It adopts meaning based on the set of circumstances or the context in which it is considered. Sometimes, it conjures a feeling of temptation. Other times, it denotes a will to do or achieve something. In the world of the flesh, desire is the fuel, and we desire the moment we are born. The umbilical cord isn't even cut yet before we start desiring milk. It is flat-out inescapable.
That's because we are of the flesh, literally and figuratively, and we will always be in want. There will always exist in us, a sense of dissatisfaction. It can flare up, lie dormant, or creep along under the surface of our consciousness. But one thing's for sure...desire is a constant. This lesson will place desire into easy-to-digest categories, and break down the concept so that you can understand the ins and outs, piece by piece.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Understand the fundamental principles and nature of desire
- Explain the necessity of desire, as well as both sides of desire
- Gain an awareness of the role that desire plays in one's life

Key Concepts

Desire Lives and Thrives Within The Unseen World Of The Heart

Here is an easy, starter definition of desire to set the stage for our discussion: desire is the will to satisfy your wants that span your body, your emotions, and your sensibilities.

When you experience physical exhaustion, the desire to achieve comfort becomes relatively strong. After you are in the realm of comfort, desires sprout within your emotions and your cognition. You may be able to fulfill your desires, but the sense of satisfaction is always momentary. In fact, the void often feels larger.

People pursue their desires hoping that it will bring them happiness and satisfaction. However, once they fulfill their pursued desires, they find that there is another set of desires waiting to be fulfilled. The more we pursue the fulfillment of desires, the larger those desires become. We are seemingly successful every now and then. But people fail to find true happiness, and the emptiness they experience becomes exponentially more pronounced.

As people strive their entire lives to fulfill their desires, they lose control of these desires and huge problems appear. Therefore, a clear understanding of desires and practicing self-control over them will undoubtedly help you overcome the problems that result from desires.

WEEK 7	Heart Developer

DCC WORKSHEET	**Course Title:**	**IR 1 Mind Education**
	Instructor:	***JIN EUN KIM***
	Student Name:	
	Course:	
	Year:	
	Date Submitted:	

ASSESSMENT: Appropriate desires are beneficial because they are the driving force to move people. However, there can be problems when the desires are inadequate or overdone.

Directions. Fill in the space below as you think about the appropriate desires.

Level of Desire	Low	Moderate	Excess
Food	Malnutrition	Health, Balance of nutrients	Obesity, Adult Disease
Video Games			
Use of Social Media			
Wanting to fit in			
Ambition to be the best			
Wanting to win			

Unhealthy desire also negatively affects relationships with others.
As we live, we must constantly “check” our desires.

Characteristics of Unhealthy Desires	Characteristics of Healthy Desires
☐ Creates conflict in your relationships	☐ Strengthens your relationships
☐ Empty, vain	☐ Fulfilling, satisfying

WEEK 7	Heart Developer

DCC WORKSHEET	**Course Title:**	**IR 1 Mind Education**

ASSESSMENT: Appropriate desires are beneficial because they are the driving force to move people. However, there can be problems when the desires are inadequate or overdone.		

Directions. Think about the desires you have in your heart. Use the chart below to categorize desire as healthy or unhealthy.

My healthy desires	My unhealthy desires

Now choose 2 of your unhealthy desires and complete the chart below.

Level of desire	Low	Moderate	Excess

Unit 2: Self Control
Chapter 1: Desire
Lesson 2: Relationship Between Economic Growth and Desires

Introduction

The world has come very far in terms of economic growth in the past 50 years. Overall, there has been a huge increase in the standard of living for today's generation when compared to that of previous generations. According to Our World Data, in 1970 almost half of the world's population lived in extreme poverty (1.77 out of 3.6 9 billion people). But in 2015, that number was less than ten percent (733.48 million out of 7.35 billion people). We can say that one of the main reasons we live much better today is because of the sacrifices and efforts of the generations that came before—people of that generation didn't want us to endure the same hard-ships they did. However, economic growth does not automatically translate into more happiness.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Explain how a plentiful environment results in a lower level of satisfaction and a weak heart
- Understand how economic growth and technological development create and increase new desires at a faster rate than a person's ability to fulfill them

Key Concepts

Economic Growth and the Heart

The generations of the past may have thought we would be happy once the difficulty of hunger was resolved. This was because for many people, happiness and even survival depended on the ability to live and eat well. However, even though we live and eat much better today, we aren't necessarily happy or satisfied. How do we know this? While life overall may have improved, not everyone is satisfied or fulfilled with what they have, and everyone is always craving something better.

For example, take a person who owns a really nice car. How long will the joy and satisfaction from owning this car last? They may be happy for the first year or two.

But eventually, the joy they got from driving this car in the beginning will diminish little by little. Ultimately, they will envy others with more expensive cars and feel dissatisfied with their own. Now, having a nice car is no longer something to be happy about to this person, and they are not fulfilled. To someone who cannot afford even a used car and has to walk for miles just to get around, this may sound ridiculous. But it seems totally normal to the owner of the nice car. In fact, if you were to give the owner a new car that is of a slightly lower class than the one that they had before, instead of being grateful to have a new car, they will complain. Living like this, always chasing after vain desires, this person's heart becomes desolate and dissatisfied despite living an abundant life with nice things. So, will we be happy just because we live in abundance? The answer is no.

WEEK 8	Let's Think About It

WEEK 8	Let's Think About It

DCC WORKSHEET

Course Title:	**IR 1 Mind Education**
Instructor:	***JIN EUN KIM***
Student Name:	
Course:	
Year:	
Date Submitted:	

ASSESSMENT: As a country's economy grows, so do the desires of the people. We become less satisfied with the simpler things in life and more consumed with finding easy, less challenging solutions. It creates in us an insatiable desire to always have and want what comes easily, with the least amount of effort. But is that good for us? Being aware of the positive and negative effects of anything is important in helping us to maintain self-control.

Increased variety and availability of products	→	Increased variety and availability of products
TV, cable, streaming services	→	Every kind of entertainment at your fingertips
Internet	→	Easy, quick access to everything
Increased food supply and mass production of food	→	Only eat what we want throwing away tons of food.

Directions. Examine the chart above carefully and think about how economic growth has affected particular aspects of our lives. Discuss the benefits and the drawbacks.

Economic Growth	Positives	Negatives
Increased variety and availability of products		
TV, cable, streaming services		
Internet		
Increased food supply and mass production of food		

Reflection Question

What must you be cautious of as you think about how economic growth affects your life?

Unit 2: Self Control
Chapter 1: Desire
Lesson 3: Social Problems from Following Desires

Introduction

In the dry Kalahari Desert of southern Africa, native bushmen have a way to find water during times when it is the scarcest. It is called a 'salt trap'. Baboons, along with many other animals, love salt. So, a bushman takes some salt and plays with it right in front of the baboon so it sees. The bushman puts the lump of salt in a hole in the ground and watches from a distance. Sure enough, the curious baboon approaches the hole to get the salt. When it comes and sticks its hand in the hole, it grabs onto the salt. But as the baboon tries to pull its hand out, it is too big to remove from the hole with all of the salt in its grip. The baboon is trapped, but it won't let go of the salt that it wants so much. The bushman comes, grabs the baboon, and throws it in a cage.

By chasing after and clenching onto the salt that it wants so much, the baboon is captured and locked in a cage. We also often put ourselves in unnecessary problems and circumstances that could have been avoided when we impulsively follow and give into our desires without thinking twice. After feeding it all the salt it wants, the baboon will get thirsty and can lead the bushmen to an unknown water source.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Explain the problems that may occur when there is no proper control over desires
- Explain the causes of addictions and crimes, in terms of desire and self-control
- Establish the basis for a heart of self-control

Key Concepts

When People Act Impulsively, Their Desires Lead Them Down a Bad Path

In the previous lesson, we talked about how even though people are living better economically than they were 50 years ago, that doesn't mean that they are necessarily happier. One trend that is indicative of this is the steadily increasing suicide rates in countries like the United States. In 1999, the suicide rate was 10.5 per 100,000 people. In 2018 it was up to 14.2 per 100,000 people. That is a 35% increase. In 2019, it was listed as the second leading cause of death for people between the ages of 10-34 in the U.S. Let's go back to the person who isn't happy even though they live a comfortable life. Such a person will keep chasing their desires because they are boundless, and will only continue to grow, leaving this person dissatisfied no matter what they do or possess. That is why people will do anything to be happy.

There is the preciousness of clean air and water. There is the joy of being able to get a good night's sleep in a comfortable and safe place. There is hope that comes from waking up and starting a new day while looking at the rising sun. And there is the satisfaction that comes from working hard and reaping the fruit of that hard work. But today, many people have lost the happiness that exists in these small things, and chase after more extreme or stimulating things instead. True happiness and joy get pushed out as we act impulsively to find some other sort of happiness by quenching our spontaneous desires.

However, acting impulsively to find happiness opens the door to unhealthy and even dangerous desires. Couple that with the fact that desires don't only drag us when we're just looking to be happy, but also when we're looking for an escape from the problems we can't overcome. Whether it is to be happy or to escape, when we are at the whim of every desire that arises without practicing self-control, then misery. addiction, violence, and crime begin to plague individuals and the societies we live in.

WEEK 9	Let's Think About It

DCC WORKSHEET	**Course Title:**	**IR 1 Mind Education**
	Instructor:	***JIN EUN KIM***
	Student Name:	
	Course:	
	Year:	
	Date Submitted:	

ASSESSMENT: It is important that we take the time to examine the desire and habits in our hearts. Are they healthy? Are they creating a strong heart and mindset in us?

Directions: Complete the chart below.

What is the desire or habit you want to stop?
When did you start being dragged into this desire or habit?
How often are your thoughts consumed with this desire or habit?
Why did you start feeling the need for this desire or habit?
How do you feel after you have engaged in the desire or habit?

Discussion: After interrogating your desires, what did you learn about your heart and how desires work? *(Minimum of 200 words)*

Unit 2: Self Control
Chapter 2: Self-control
Lesson 1: Self-control, Desire's Brakes

Introduction

Automobile manufacturing in America is a gigantic industry–did you know that in 2020, 8.8 million new automobiles were made in the United States alone? And that number was the lowest output in eight years. There is always a person or a family in the market for a new car and it has become something essential for our lives.

But back in 2019, the automotive manufacturer GM had to recall 3.8 million of its vehicles due to a faulty brake issue. A recall means that customers have to return the car they have because there is a problem with it that might put them in danger. Sometimes, there's an issue with the engine or the transmission–other times, it might be the seat belts. But with GM, millions of their cars had a brake problem. Imagine how much money it cost the company to recall that many cars at one time.

A vehicle cannot be driven without brakes. It doesn't matter how fast it accelerates, how shiny the paint job is, or how strong the tires are. Whether you have a 30–year old hatchback or a brandnew luxury SUV, bad brakes make a car unusable–it's a hunk of expensive metal and plastic. The same can be said for our hearts without the ability to exercise self-control.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Understand self–control and its necessity in our lives
- Discuss the three dangers when self–control is absent
- Introduce ideas on how people can develop self–control

Key Concepts

Titanium Brakes for 3-Million-Dollar Cars

The Bugatti Chiron is one of the fastest, most expensive, and most luxurious cars ever made. This French supercar has a 16-cylinder engine that is 1,500 horsepower strong. This engine allows the car to hit a blistering speed of 260 miles per hour.

Currently, the fastest speed that can be legally driven in the United States is 85 miles per hour. So, it is impossible to find a public road in America to test the Chiron's top speed.

To match the 1,500 horsepower engine, the Bugatti company had to develop brakes to handle such friction. Traditional brakes cannot handle the mighty engine's heat and power, so Bugatti built a custom brake system for the car. While conventional sports cars have brake calipers made of aluminum, the Chiron uses titanium, a much stronger metal. Since titanium is not as malleable as aluminum, the brakes required innovative 3-D printing technology to manufacture them. It takes 45 hours to make one brake caliper, and the final product can withstand temperatures up to 1,850 Fahrenheit. The Chiron proudly features the world's first 3-D printed, titanium-brake system.

The faster a car can go, the better the brake system has to be. Sports cars can only go at their high speeds because they have trustworthy brakes. No matter how luxurious a car may be, it is undrivable if the brakes are faulty or not up to standard We have the desire to chase our dreams and aspirations, but we need the "brakes" in our hearts to stop when

we need to. If we let our desires run amok, our lives will quickly turn chaotic, uncontrollable, and miserable.

The Brakes of Our Desires

Let's consider our desires, the engine of our lives. Our wants drive us to take actions that help accomplish specific goals. As we discussed in previous lessons, our desires are sometimes short-sighted and insignificant. For example, when we see delicious food, we crave it-that's one type of desire.

WEEK 10	Let's Think About It

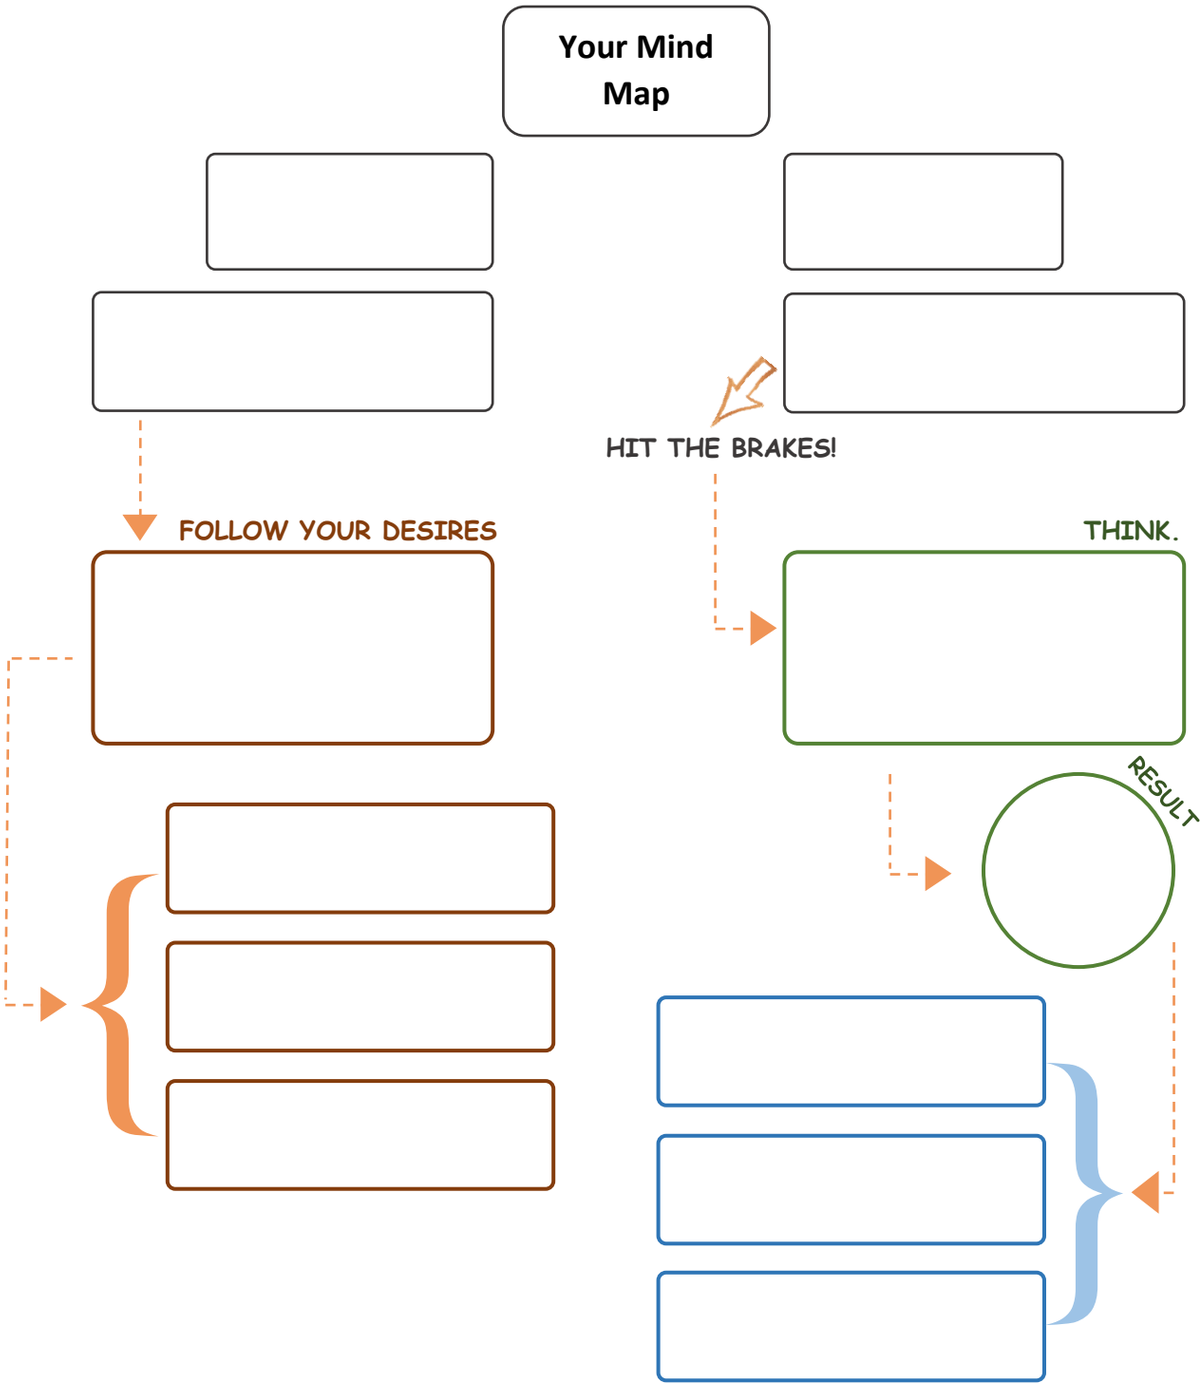
ASSESSMENT: We need of the heart in order to control our desires.		

Directions: Make a mind map about a situation that you are currently faced with.



Unit 2: Self Control
Chapter 2: Self-control
Lesson 2: The Self-Control to Break Out of the Frame of our Thoughts

Introduction
Our hearts are fascinating spaces. We're learning more and more about what the heart can do, where it can go, to what heights it can reach, and the depths it can spiral down if not properly managed with self-control and discipline.
Perhaps the biggest thing to appreciate when it comes to our hearts is its ability to bend and break. The breaking of the heart refers to the flexibility of the heart to pull back, stop, pivot from its initial direction, and head into a new and beneficial direction. We'll dive deeper into what bending and breaking the heart means and how it can be applied in our everyday lives. We'll also discuss how this can benefit us and the people we care about and interact with on a regular basis.

Learning Objectives
LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes
- Understand what the frame of our thoughts are
- Consider the ways we can "bend" and "break" our hearts through self-control

Key Concepts

Leaving the Nest to Fly
The bald eagle builds its nest on the edge of a high cliff or a tall tree and lays its eggs there. When the hatched eaglets have grown to a certain age, the mother eagle decides to let them fly. She uses various methods to encourage the baby eagles to test their wings and try flying out of the nest. Sometimes, when she brings food that she has hunted to the nest, the mother eagle lands on a nearby branch and starts to eat the catch by herself. Her slight taunt coerces the hungry eaglets to come out of the nest and challenge themselves to fly. As far as the eaglet is concerned, the nest is the best place to be. It feels insecure about leaving the nest-flying in the open air is one scary proposition. Nevertheless, the eaglet must brave its fears and come out of its comfort zone in order to experience true freedom. It has to exercise its wings so it can build the strength to hold its weight in the air. It also has to study how other adult eagles fly to understand how to avoid hurtling to the ground. Endeavoring to fly is hard work, it would be much easier to relax and wait for the mother eagle to bring the next meal. However, if the eaglet never leaves home, the vast, beautiful world beyond the nest will remain distant. For the eagle to live its life to the fullest, it must summon the courage to jump out of the nest, spread its wings, and fly. You can say that there are two "nests" in our hearts that we must leave to live a fulfilling and happy life. The first nest is the nest of our desires. Our body continually lures us to eat, drink, sleep, and chase after instant pleasures. Often, we want to play video games, hangout with friends past curfew, and spend time on social media.

Although we know that these activities will not get us anywhere near our goals, the comfortable "nest" of desires has caged us in our hearts. These sorts of people are like eaglets who are comfortable living without flying. An eagle confined to its nest will feel unfulfilled; likewise, people trapped in the never-ending marathon of instant gratification will live a disgruntled and unhappy life that they will later regret. We need self-control that can limit our desires.

WEEK 10	Let's Think About It

ASSESSMENT: The problem of our thoughts is that it is extremely limited, narrow, and untrustworthy. Often our frame of thought guides us to make decisions that hurt our development.

Directions: Answer the following questions. *(Min. 150 words)*

When we have the self-control to bend our heart to do the things that we don't want to do and bend our hearts to stop doing the things we like, we form an inner strength

1. What are the things that you don't want to do, but are going to bend your heart and do them?

2. Share a moment when you thought you were right, but after listening to someone else, you realized you're wrong.

Unit 2: Self Control
Chapter 2: Self-control
Lesson 3: Cultivating Self-Control

Introduction

Have you ever seen a bonsai tree before? A bonsai tree is a plant cultivated to look like a miniature representation of a full-sized tree. Cultivating bonsai is regarded as an ancient art form that originated in China, and bonsai craftsmen have made the art form recognizable worldwide. Bonsai masters are hard to come by as the techniques to grow proper bonsai are often complicated as the plant is delicate and fragile. A single mistake can ruin or kill a bonsai plant that has been growing for centuries and passed down from generation to generation.

All plants have their preferred way of growing. However, if the plant grows the way it grows naturally, then it has no hopes of becoming a bonsai tree. To have the tree grow into the desired shape, a bonsai artist must repeat two essential actions: prune and wire. The caretaker carefully prunes and cuts away unnecessary branches and parts of the plant for the overall shape. Wires are used to twist the trunk and the branches to resemble the appearance of a real tree. Through careful pruning and wiring, the bonsai tree transforms from a regular plant to an exquisite piece of art.

When properly groomed, the bonsai tree becomes a masterpiece that fetches an enormous price. One bonsai convention yielded the sale of a bonsai tree for over a million dollars in Japan. Some families have methodically nurtured bonsai trees in parts of Asia for generations, and these plants are considered priceless by bonsai experts and will never be sold. Both pruning and wiring prevent the plants from growing in their natural direction. However, these bonsai techniques increase the value of the bonsai plant and nurture a common shrub into a treasure.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Identify the reasons why it's best to cultivate self–control when we are young
- Compare the two types of parenting in the development of self-control

Key Concepts

Pruning and Wiring the Heart

Our heart has a natural direction it wants to go, but if we follow our heart to wherever it desires, we will either get nowhere in life or bear heavy consequences. We have to use self-control to "prune" and "wire" the natural tendencies of our hearts. Although it's often a struggle, once we manage our heart's wild inclinations, then our lives improve significantly, just like how bonsai trees go up in price in correlation to the amount of pruning and wiring it has gone through. It is accurate to say that the more the plant has been cultivated with bonsai techniques, the higher its value. The more we discipline our hearts, the more we develop our self-control, the greater our lives can turn out.

Starting Young

Young people have the strength to strive to accomplish their ambitions and dreams. Studying hard, doing research, and practicing an instrument are all beneficial activities to participate in. If young people did not have the motivation or drive to chase their goals, then they would be unable to progress in life. Despite the pros of having the energy to do

things, it's important to remember that the ability to control yourself has to be nurtured inside of you simultaneously.

Many people place value in developing their reading or math skills. However, what is much more important than that is learning self-control to govern our hearts. Just like most skills, we can learn self-control best when we are young. For example, young people learn languages more effortlessly and more effectively. If you learn to speak a foreign language in your twenties, you may talk well, but your pronunciation will not be precise. It grows more challenging as time passes, and learning a new language at the age of 50 is very difficult. It is most effective and beneficial to learn self-control at a young age.

People tend to do whatever they want. That is why they must train themselves to control their hearts from a young age, starting with minor things. We have to "bend" the desire to do whatever we want, whenever we want. Often, people go through unnecessary difficulties and hardships in life due to the mismanagement of their hearts. If human nature only strived to fulfill the good intentions inside people, we can live in happiness without any problems. However, the heart does not easily yield to our better judgment. Usually, our heart drags us to places we shouldn't go, which creates serious problems. The people who have failed to learn self-control since their youth often fall into things like drugs or gambling and are unable to break free of the bonds their own heart has wrapped around them.

WEEK 11	Let's Think About It

Year:	
Date Submitted:	

ASSESSMENT: In our daily lives, we encounter many rules that must be followed. These rules are sometimes imposed by the government, our school, our parents/ caregivers, and sometimes by our friends.

Directions: Let's take a moment to jot down a few rules to us, and think deeply about them.

Rule and why it bothers you	Imposer of the rule	Why did they make that rule	How can that rule be beneficial
You have to be 16 in order to drive but I'm 14 and I want to drive now.	The government	They think people under 16 are not responsible enough to drive and make mature decisions.	It protects other drivers on the road from potential accidents caused by the irresponsible decisions of young students.
My mom gives me a curfew of 10pm when I go out with friends, but all my friends get to stay out late.	Mom		

Choose 2 Imposers of the Rule column and reflect upon the following questions:

Imposer of the rule	How I felt about that person before this exercise	How I feel about that person after thinking deeply

Is it necessary to have people in our lives that help us to develop our self-control? Why? Write your answer in the box below.

Unit 2: Self Control
Chapter 3: Happiness and Self-control
Lesson 1: Self-control for a Fulfilling Life

Introduction

The world may offer us money, pleasure, recognition, and power. A lot of people view these things as means to satisfaction while others equate them to happiness. For example, one person might think having money in their bank account will make them feel good. Others might assume that having power and control will bring them joy. But here's the truth: happiness comes from the flow of our hearts into the hearts of others.

So, what does all this have to do with self-control? If we seek to fulfill every desire that arises from within us, we are unable to focus on other people, including our loved ones. The capacity for self-control gives us enough leeway in our hearts and enough space in our minds to consider the feelings, situations, and struggles of those around us. We stop trying to satisfy ourselves, and rather, we look to forge genuine connections.

We'll dive into why we should stop thinking of self-control as restricting and start considering it as a way to experience true freedom.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Identify how our level of self–control defines our degree of freedom
- Describe how self–control is a prerequisite to happiness

Key Concepts

The "Resource Curse"

Scholars of international economics have often commented on the "resource curse." Historically, most countries with an abundance of natural resources, such as oil or diamonds, have failed to develop infrastructure and improve the quality of living for their people. This "paradox of plenty" is quite baffling; countries blessed with rich reserves of mineable minerals and fertile farming land should have an economic advantage. Strangely, these governments do not optimally utilize their natural resources to stimulate national growth.

There are several reasons why the "resource curse" occurs around the world. Countries, with a single, highly-valued natural resource, such as oil, unwisely focus all their infrastructure development on extracting more of their primary export, concentrating solely on building more offshore oil rigs. Economies must be diverse in order not to suffer when single commodity prices fluctuate. When the cost of their main export drops, the entire economy stagnates. However, the more prominent reason for the curse is widespread governmental mismanagement and political corruption.

Typically, governments of resource-rich countries receive a large portion of the wealth generated by exports. A properly managed political leadership would invest such wealth into its economy to help the citizens make a living. For example, in Botswana, the ruling parties used the wealth gained from diamonds to help the rest of the economy grow. Now, Botswana enjoys one of the highest standards of living in Africa.

Unfortunately, in most cases, the ruling class extorts a lot of the wealth. They use this capital to acquire and increase their political power. They often bribe residents to vote for

them in elections or use violence against dissidents–case in point, the government of Equatorial Guinea, which silenced dissenters through politically motivated arrests.
Financial mismanagement breeds a stagnant economy and suffering for the working class. Many experts compare natural resource wealth for countries to lottery winnings for Individuals. Statistically, the vast majority of lottery winners end up bankrupt and worse off before their jackpot. Like how resource-wealthy countries do not have the proper governance to manage their income, many individuals do not have the self-control to manage their lives.

WEEK 11	Let's Think About It

ASSESSMENT: The problem arises when we are unable to control our desires, which will ultimately lead to ruin.		

Reflection Time

1. Research and identify a country that has also escaped the resource curse such as Botswana. How were they able to achieve success?
2. What principles can Venezuela learn from Botswana?

Directions: Answer the following question about the relationships between happiness and self-control.

1. Vain desires are like a wall in front of you. They seem to be protecting you but they are trapping you. What is the happiness that already exists in your life that desires are blocking you from seeing and experiencing?

   _____
   _____
   _____
   _____
   _____
   _____.

2. Through self-control, what desires will you put the brakes on?

   _____
   _____
   _____
   _____
   _____
   _____.

3. Think about small joys in your life. It's okay if they're small-jot them down and share why you are grateful for them.

   _____
   _____
   _____
   _____
   _____
   _____.

Unit 2: Self Control
Chapter 3: Happiness and Self-control
Lesson 2: Understanding Addiction

Introduction

Cam Adair was a regular student living in Canada. He enjoyed practicing hockey with his dad, and they would run practice drills at their local ice rink together. Although hockey was his passion, he started to get severely bullied on his hockey team and at school. One day, he told his parents he would quit the sport he loved, which confused them. Cam turned to video games for his escape. In the video games he played, he was safe from the negativity and bullying from school and able to express his more competitive side. He would play to win, and winning in the video game made him feel good. However, his joy of video games soon turned into a destructive addiction.

Because of his addiction, Cam dropped out of high school at the age of 15. When his parents forced him to get a job, he told them that he became an employee at a local restaurant–his dad would drive him to work every morning. However, Cam had lied about his employment. After his dad would drop him off at the restaurant where he supposedly had a job, Cam would wait for his dad to drive away and then catch a bus back to his house. Since his parents were still at home when he got back, he would sneak back into his room through his window. He then would sleep until around 4 pm when his parents would come back home. He would lie and say that he had gotten back at one and was taking a nap. The reason why he would sleep all day was that he was gaming all night. The pain he felt from being unable to control his addiction and the guilt of lying to his parents daily led him to seriously contemplate suicide. At the lowest point, he told his dad about his addiction and started his road to recovery through therapy and advice from counselors.

After beating his addiction, Cam is now the founder of GameQuitters, an online forum helping over 50,000 people struggling with game addiction every month. At his Ted Talk, he spoke about the solutions for young people addicted to video games. First, since most video game addicts started playing video games to escape boredom, parents must encourage kids to interact instead of entertaining themselves. Second, addicts must identify the motivations for why they play video games, such as the joy of winning, to relieve stress, or to express their competitiveness, and then live out these motivations in activities, not from gaming. Thirdly, addicts should work on their social skills since gaming addiction has grown from isolation and loneliness. With these principles, Cam has been working to free video game addicts from the innocent hobby that has become a vice.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Explain the two models that were used to understand addiction by experts for many years
- Discuss some of the questions that the two models of addiction cannot answer for

Key Concepts

Addictive Behavior

Before, the idea of video game addiction was almost laughable to most psychiatrists and medical experts. Of course, how can people compare addiction to video games to addiction to alcohol or drugs, substances that create an observable, biological reaction? However, it was finally in 2018 that the World Health Organization (WHO) officially recognized "gaming disorder" as "addictive behavior." Cam's advice for video game addicts might at first seem far-fetched, especially when interpreted through the lens of addiction. Imagine trying to tell a heroin addict or hard-core alcoholic to "interact more" or "work on their social skills." However, Cam and many others who study addiction prove that past addiction studies may not completely illustrate the entire concept. Perhaps, a new way of understanding addiction that does not simply harp on the chemical aspects of drugs or the hormonal factors of dopamine must be established in the field.

Addiction Interpreted Through the Lens of Morality and Medicine

As expected, the story of addiction is as old as the story of humankind. However, the conceptualization and the study of addiction have changed over the ages. First, the popular way of understanding addiction in the 1800s was called the morality model. The basis of the model was that people have the power to make their own choices, but choose to make bad decisions with the privilege of free will. For example, in terms of alcoholism, although many people were social consumers of alcohol, drunkenness was frowned upon by the general public during this time frame. Generally, people did not want to be shamed by their colleagues, so they would try not to get drunk. Suppose one were to see an intoxicated person. In that case, it could be assumed the individual could not maintain their virtues and succumbed to the temptation of alcoholic beverages to the point of public drunkenness. Thus, the way to solve addiction to alcohol was through punishment, such as the social shame of being unable to control one's consumption of hard drinks or physical punishment by the law. Proponents of the morality model of addiction supported government legislation that banned the sale of alcohol with the hopes that the fear of punishment would prevent alcoholism. This logic gave way to the legal prohibition of the sale of alcohol in the United States during the 1920s.

The second model of addiction is called the medicine model or the disease model. According to this perspective, addiction is considered a disease, leading to the reasoning that the addict needs treatment rather than punishment as suggested in the morality model. According to early scientists in the 1900s that supported this model, some people had a failure in their nervous system that gave them the constant urge and desire for alcohol and drugs. The disease model is based on the assumption that addicts and regular people are inherently different in some biological or mental way. This "tendency to addiction" exists in the addict either from their birth or when they start their addictive activity. Proponents of the disease model advised addicts to quit their addictive activity altogether or stand no chance of breaking free from their sickness of addiction.

Over time, as the study of addiction progressed and expanded, experts began to question the validity of the disease model. According to the disease model, the best cure for addiction was quitting altogether. But, then the question is, how does an addict quit in the first place? For example, if someone is an alcoholic, how do they muster up the self-control to quit alcohol so that they can quit being an alcoholic?

What can we learn about addiction and how to overcome it?	

Is there an addiction that you are struggling with? Is there something in your life that you know has the potential to become an addiction? Please share briefly on a whole sheet of paper.

Unit 2: Self Control
Chapter 3: Happiness and Self-control
Lesson 3: The Heart Model of Action

Introduction

Dr. Nora Volkow has been the Director of the National Institute on Drug Abuse since 2003. As a scientist and a scholar, her life's research was to find out exactly how drugs cause addiction in the brain. Her research has involved the study of dopamine in the brain. Dopamine is the chemical that our body produces to send messages between cells in the nervous system. Dopamine controls how we feel pleasure, and pleasurable activities or substances increase the amount of dopamine produced. Drugs significantly increase dopamine production in the brain, which gives the person a feeling of pleasure. Before, the commonly held theory of addiction was that the brains of addicts were more sensitive to the increase in dopamine produced by the drugs. Since addicts feel more pleasure from drugs, they become addicted to them.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Explain how the heart changes during part 5 of the Heart Model of Addiction
- Learn the main reason we need a way to have “us–control" rather than self–control to overcome addiction

Key Concepts

One Last Moment of Self-Hatred

However, this theory is not valid. As many modern scientists, including Dr. Nora had discovered, the opposite situation was happening in the nervous systems of addicts. Although at first, addicts were getting a large amount of dopamine produced when they would take the drug, over time, the drug would not make as much dopamine. This was a revolutionary finding in the study of psychiatry and addiction. Drugs were rewiring the prefrontal cortex, the area of the brain that affects the ability to make decisions, the level of self-control, and the level of impulsivity. Thus, addiction was not about the patient’s willpower. Instead, their entire brain has been conditioned or re-coded to continue craving drugs and irrationally partake in actions to obtain drugs, no matter the cost.

Dr. Nora's addiction treatment was greatly impacted by her mother's fatal cancer call. Her mother wanted to share something important Dr. Nora's grandfather never told her. 35 years prior, Dr. Nora was told her grandfather had died when she was five. His heart troubles killed him, according to her mother. However, Dr. Nora's mother told her that her grandfather died from alcoholism. His inability to control his drinking made her grandfather despise himself. His effort to quit drinking and sad relapse into alcoholism wore him down. Dr. Nora said her grandfather committed suicide in "one last moment of self-hatred."

In an American Psychiatric Association address, Dr. Nora explained why she was stunned by her mother's statement. She first discovered her grandfather's death story was false. She was also shocked because her mother had always hidden this about her grandfather. Was it because her mother knew she was a psychiatrist who investigated medication effects on the brain? Maybe because her kid told her addiction was a brain disease? Was shame involved? She took this chat to heart and wanted everyone to relate to addiction. Addicts, friends, family, therapists, and doctors realize it's okay to talk about addiction. The story of her grandfather inspires Dr. Nora to help addicts. Her grandfather died, but she hopes his experience shows that we should show empathy to addicts and use a multipart treatment that promotes non-addictive behavior.

WEEK 12	Let's Think About It

Directions: Discuss what Cam went through, the causes of these stages, and any connections you have in your own life.

Questions	Reflect + Discuss + Share
Is there an addiction that you are struggling with or is there something in your life that you know has the potential to become an addiction?	
Talk about it… • How did it start? • Why did it start?	
What are the thoughts that are crippling you and preventing you from seeking help? What are specific things that must change in order for you to be happy and free from your addiction or debilitating habit?	
Who can you talk to? Why is this person good to talk with?	
Final Thoughts:	

Unit 2: Self Control
Chapter 3: Happiness and Self-control
Lesson 4: Freedom from Addiction

Introduction

Scott Strode should have died that night. He had a tragic past that many of his fellow addicts would share–he grew up underneath a mentally unstable and abusive father. He started to drink at the age of 11 and became a helpless crack addict at the tender age of 15. The now 24–year–old locked himself in his apartment in Boston, and drank and snorted cocaine for 24 hours straight on his bathroom floor. He had used so much cocaine that his heart was pounding so heavily that it felt like it would explode. He thought that he was going to die. However, he remembered his mom and realized the sad reality that if he died from a drug overdose, someone would eventually bring the tragic news to her. He then made a commitment to quit.
He started going to the gym regularly to practice boxing. After seeing a flyer, he began to ice climb. While he was climbing, the stillness of the mountain stripped his heart of the usual self–loathing thoughts that he felt towards himself as an addict and gave him a sliver of hope that maybe he was not destined to spend the rest of his life battling addiction. On that mountain top, he had found hope that he could change, and that hope drove him to challenge himself further with his participation in triathlons and iron man competitions. As of 2021, Scott has celebrated more than two decades of complete sobriety from cocaine and alcohol. He has used the opportunity for addicts to engage in various fitness programs such as yoga, weight lifting, and multiple sports.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Describe with the story of Scott Strode why sobriety requires a nurturing community
- Explain how the heart is like a vessel and how filling it with hope can overcome addiction
- Give the reasons why a recovery addict can find thankfulness in the story of their lives

Key Concepts

Nurturing Community

Scott considers trauma to be the largest culprit of addiction. Although some people have experienced highly traumatic events in their lives such as sexual abuse, he argues that even fewer forms of trauma have developed into an addiction. Getting bullied at school or experiencing the divorce of one's parents are all sources of trauma. Although the damage done by these events cannot be seen without us knowing, they influence how we make decisions in our lives and what we decide to connect with. The combinations of small traumatic events in our lives compose the large wounds in people's hearts, which they might try to mend with drugs or alcohol Interestingly, Scott recommends a nurturing community as the solution for both trauma victims and recovering addicts. The nurturing community provides faith, hope, emotional acceptance, and many other things of the heart that gives strength to the addict to keep sober. Scott's work has led more than 22.000 people to overcome their addictions and live a bright life.
How can we break addictive habits? How can we maintain our sobriety after we have quit? Although we might know that going to rehabilitation centers and building positive relationships might help addicts, we need to know the exact mechanisms of the heart that lead to sobriety and maintain it. As we found out in previous lessons, addiction is not

overcome through the addict simply trying harder or motivating themselves to resist temptation. Instead, addiction can be overcome when they enter support systems, such as Scott's "nurturing community." to find the strength to overcome their addiction. How do these support systems and the philosophy of "us-control" rather than self-control help the addict? It is because when we receive hope, thankfulness, and joy from others, our hearts become strong enough to break free from addiction.

Hearts Filled with Hope and Joy

Our hearts can be compared to a bowl or vessel. Our hearts can be filled with different kinds of thoughts and feelings. Addicts have had their hearts filled with despair, self-loathing, self-condemnation, trauma, and many more negative thoughts, all catalysts of addiction. Addicts who have tried to mend the scars of their hearts with alcohol will feel the urge to have a drink every time they feel a little bit insecure or nervous; the pathways of their brains in terms of dopamine have been repaved to react in that fashion. However, what is essential is to know that our hearts can be filled with hope. When our hearts are filled to the brim with positive thoughts, two things occur.

> First, we find that there is no more room in our hearts for despair or self-hatred that we may have been experiencing for a long time.
>
> Second, we will realize that our hearts have the strength to move forward and challenge ourselves to live a fulfilling life.

After every climb and every race, Scott described himself to feel a little less like an addict and more like an athlete. He discovered the hope that he can overcome his addiction and live a normal and even extraordinary life on the mountaintop. This insertion of hope in his heart led to the strength to maintain sobriety for a lengthy duration. Our hearts can also be filled with joy. When we have joy in our hearts, we are less susceptible to the wavering of our hearts in front of addiction. Also, genuinely happy people do not see the need to squeeze more pleasure from narcotics abuse or alcohol but instead, live their lives free from such artificial restraints of the mind and heart.

WEEK 13	Let's Think About It

DCC WORKSHEET	**Course Title:**	**IR 1 Mind Education**
	Instructor:	***JIN EUN KIM***
	Student Name:	
	Course:	
	Year:	
	Date Submitted:	
ASSESSMENT: The key to overcoming addiction is **connection** but we cannot do this on our own!		

Directions: Let's navigate our hearts and think deeply about our lives and habits.

What habits have you developed that you know are problematic?
What is the thought or situation that you are trying to escape from?
How do you feel right after doing this habit?
How does the habit solve the problem?
Is the risk of this habit becoming an addiction worth it? Explain.
Of the three mistakes mentioned at the beginning of the activity, which one applies to you the most? Explain.

Unit 3: Deep Thinking
Chapter 1: The Power of Deep Thinking
Lesson 1: What is Deep Thinking

Introduction
Here's a wild thought: the heart can think. The brain isn't the only thing capable of thinking. A very specific type of thinking is done within the heart: deep thinking. Since our hearts cradle our values, our nature, our will, and more, we can exercise deep thinking when we allow the depth of our hearts to intersect with our brains. One could say this intersection is our "mind."
Now, if our brains cover a breadth of information, our hearts dive deep into a topic and allow us not to take things at face value. Deep thinking can create peace in our hearts, it can expand our hearts to account for the well-being of others, it makes us more emotionally available, and we become in tune with our surroundings. It gets us past superficial assumptions and helps us discover the power within ourselves. Deep thinking turns us into wells of advice for those in need, and we can enhance any conversation or relationship we're in. Ready to think even deeper about deep thinking? Let's go.

Learning Objectives
LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes
- Be able to explain the importance of deep thinking
- Be able to talk about the benefits of deep thinking

Key Concepts

Deep Thinking is Like a Local Train on the Tracks of Life
We are tempted to spend our time at the speed of the world. Nowadays, there is a high-octane flow of information, opinions, perspectives, and communications available to everyone. We're always catching up to trends, we're constantly evolving our viewpoints, and we can get swallowed up in a flow that forces us to react versus think. Failing to do so creates a sense of FOMO (Fear of Missing Out), threatens ostracization, and can lead to isolation. Deep thinking involves creating "thought stops" along the tracks of life. There are times when we should accelerate but we must also give ourselves the opportunity to stop. Reconsider, play out our thoughts to their ultimate actions, and filter our inputs, whether those inputs are thoughts or external stimuli. It is very important to make stops so we can understand our surroundings, calibrate our moral and emotional compasses, and be of value to others who may be living impulsive, superficial lives.

Deep Thinking can Usher in New, World-Changing Ideas
Wheels with rubber tires are the norm these days, but even rubber tires were a revolutionary invention at one point. A long time ago, carts were equipped with metal wheels. Blacksmiths would forge the wheels on fire and fuse them to wooden frames. The metal wheels were strong, but they couldn't absorb shock. Wrapping them with rubber made a difference, but it was still very uncomfortable.
In 1888, after much trial and error, a veterinarian named John Boyd Dunlop inflated a rubber tube with air, which eventually became the tire. The invention was inspired by a very small observation. One day, Dunlop's son was riding his tricycle and Dunlop noticed it was a rough ride because the rubber of the tire was solid. Dunlop saw this and that's how he got the idea for an inflatable tire. Dunlop was a deep thinker not because he was smart, but because he viewed problems as more than problems…they were opportunities.

WEEK 13	Let's Think About It

DCC WORKSHEET	**Course Title:**	**IR 1 Mind Education**
	Instructor:	***JIN EUN KIM***
	Student Name:	
	Course:	
	Year:	
	Date Submitted:	
ASSESSMENT: With deep thinking, we can make better choices by looking further into the matters we face and considering the impact and outcomes.		

Directions: Answer the following questions.

Question	Response
What is the regretful situation you had before?	
Who, What, When, Where?	
How did you initially react to that situation?	
After deep thinking about the situation, how would you react differently?	

Fill out the blanks for yourself. Eliminate distractions and try to spend time deep-thinking on one topic at a time.

Where is your best thinking space?	*Example:* *My favorite bench in the park near my house*	
Best ways to express your thoughts	*Example:* *Voice recording*	
Write down important words for you	*Example:* *Creativity, kindness, friendship*	
When is your best time for deep thinking?	*Example:* *After dinner*	
How do you want to reward yourself after deep thinking	*Example:* *Fruit Salad*	

Unit 3: Deep Thinking
Chapter 1: The Power of Deep Thinking
Lesson 2: The Level of Thoughts

Introduction

It is safe to say television has hindered our ability to think. Though we may gain a lot of information and knowledge from it, enjoying TV doesn't require anything more than superficial thinking. TV is a visual medium so everything is pretty much spelled out for us. We can change the channel on the TV whenever we want, and it usually only takes about five minutes or less to understand what we're seeing on screen. TV is fun to watch because we're dealing with easy–to–understand content.

Now, compare TV with a difficult book that requires two or three readings to fully comprehend its themes. See the difference? This isn't about demonizing television–it plays an important role in our lives. The point is we must give ourselves as many opportunities as possible to apply deep thinking. Why? Because deep thinking better prepares us for the unpredictability in life.

This lesson will lay out the different levels of thought that we can have as human beings, and why reaching deeper thinking is beneficial for us in the moment and in our futures.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Explain why deep thinking is necessary
- Distinguish between first–, second–, and third–level thoughts

Key Concepts

What Our Favorite Games Can Teach Us About the Levels of Thought

In the game of Tetris, blocks descend from the top of the screen and the player moves them around to fill in empty spaces and create either a horizontal or vertical line. The shapes cascade slowly at first, so gameplay starts out easy. Advance to the next level and the shapes then pour down like rain–there is no time or space to think at all. The game becomes all about hand-eye coordination, fast reflexes, and instincts. Tetris doesn't require deep thinking.

Before we move on, let's take a time to talk about the game of chess. Pawns, bishops, knights, rooks, a queen, and a king are the many pieces that make up a gaming board for the game of chess. As the game progresses, both sides are required to engage in serious thought because it is similar to a conflict between two nations. Whenever one player moves their bishop ahead, the other player is compelled to analyze that move and ask, "What was the reason for the move to be made?" The rook is going to be the one to put an end to it. Oh, he is hiding a pawn behind the pieces, just waiting to make a move. To put it another way, this is how players think about each move they make during a game of chess. They experiment with one method, and if it is unsuccessful, they switch to another strategy.

When it comes to chess, the board is limited, the choices are nearly limitless, and the objective is quite obvious. Players are able to plan ahead, think backwards to movements that have already been made, and evaluate and reconsider the goals and motivations of their opponent as a result of these conditions. Playing chess is the ideal activity for engaging in in-depth thought.

First, Second, and Third-Level Thinking

Thinking may be broken down into three levels: the first level, the second level, and the third level. The first level of thought is the most fundamental level. An individual's very first ideas are considered to be a component of the first level of mind as well. These take shape as a reaction to the world around us or to a challenge. The majority of the time, they are emotional, unreasonable, and shallow. The examination of the first level of thinking is required for the second and third levels of thought, but it must be done from a different perspective and perspective. When we examine the results of these several levels of thinking, it becomes plainly evident that the first level of thought is typically erroneous and does not provide significant information. A significant number of individuals are unable to progress to the second level of thought because they tend to believe that their first level of thought is rational and accurate. A person's ability to think on the second and third levels of thought leads to outcomes that not only have a good influence on the individual's own thinking, but also on the thinking of people around them and on society in general.

WEEK 14	Deep Dive Activity

DCC WORKSHEET	**Course Title:**	**IR 1 Mind Education**
	Instructor:	***JIN EUN KIM***
	Student Name:	
	Course:	
	Year:	
	Date Submitted:	
ASSESSMENT: With deep thinking, we can make better choices by looking further into the matters we face and considering the impact and outcomes.		

Directions: Try it yourself! How would you react to each situation in the first level of thinking, the second level of thinking, and the third level of thinking?

Situation	First Level of Thinking	Second Level of Thinking	Third Level of Thinking
You are at your friends' party and your friend offers you an alcoholic drink. You're under age and you know your parents would not approve.	I want to drink and party with my friends	Maybe I shouldn't. But just one sip will not hurt me.	If I drink, my parents will be extremely disappointed. And what if this leads to me causing trouble at the party, or outside the party? I shouldn't drink.
You have finals coming up in a week and you have not studied at all, because you are always procrastinating.			
You feel like you don't fit in.			
All you want to do is have your own time by playing video games and/or being on your phone.			
Your parents took your phone away and grounded you.			

Describe some of your personal situations and move from the first level of thinking to the third level of thinking. Use the boxes below.

Situation	First Level	Second Level	Third Level

What benefits do you notice about moving from the first level of thinking to the second level of thinking, and then the third level of thinking?

_____

_____

_____

_____

_____

_____

Unit 3: Deep Thinking
Chapter 1: The Power of Deep Thinking
Lesson 3: The Dangers with the First Level of Thought

Introduction

It's safe to say our first thoughts usually feel like the best thoughts. But our inability and our refusal to process our thoughts increase the risk of putting ourselves in harm's way.

Deep thinking is a no–brainer (pun intended) if we realize first–level thinking can be dangerous. The grass is greener on the other side, though there is so much joy waiting for individuals who can think beyond their gut reactions and immediate assumptions. Why? Because they aren't confined to one–dimensional thinking, and that opens them up to more possibilities and more avenues to explore to achieve happiness.

But if we're to look past our first level of thought, we first need to understand the dangers of it. This lesson is going to be a little different–let's run through some exercises together for a fuller view of the faults of first–level thinking.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Explain why and how living with the first level of thought is harmful
- Practice reverse thinking through various exercises

Key Concepts

First-Level Thinking is Always Fishy. Just Ask the Fish

Fish would never take the bait off a fisherman's hook if they could see and think beyond their instincts. It might feel silly, but let's imagine what the fish might say if they had the ability to use second-level thinking. "Hey, these worms don't live in the sea, so what is this guy doing here? And there is a string connected to the end of the worm! The string goes up! There must be someone on the other end! Ah, it's a fishing pole! People are trying to catch us!"

Let's play this out even further. Third-level thinking might force the fish to think about other fish in his school. "Guys! Don't go over to the right-hand side of the pond. There's a worm there and it looks delicious, but if you bite it, you're going to die. Follow me, I know a safer place to swim."

Third-level thinking is not always more intricate or detailed or complex. A third-level thought can be very simple, but it's always thought out, all the way through. And many times, it benefits others just as much as it benefits the person with the thought. This is how people, communities, and societies change for the better, as more and more people think deeply, day in and day out.

The fishing industry would be kaput if fish knew how to apply any sort of deep thinking. Thankfully, we get to enjoy sushi and tasty fillets whenever we want because fish don't know any better. So, what about us? We've been granted the ability to apply deep thinking to any situation that manifests. And deep thinking gives us the license to look beyond the surface and discover the depths of the world of the heart.

WEEK 15	Crack a note

DCC WORKSHEET	**Course Title:**	**IR 1 Mind Education**
	Instructor:	***JIN EUN KIM***
	Student Name:	
	Course:	
	Year:	
	Date Submitted:	
ASSESSMENT: Deep thinking gives us the license to look beyond the surface and discover the depths of the world of the heart.		

Crack your notebooks open, it's time for an exercise.
Grab a pen and jot down the thoughts that you're having right now. It's OK if what you write is random, just get it all on paper. We'll wait.

_____

_____

_____

_____

All done? Great job! If you're not a fan of diaries, that might have been a bit tough to do. Now, we're going to use this as a worksheet for the exercise.

Step 1: Put an **X** next to the thoughts that stick. These are your **Velcro Thoughts.**
Step 2: Put an **O** next to the thoughts that feel fleeting. These are your **Flaky Thoughts.**
Step 3: Compare your X's and O's. Which is more?
Step 4: Fill the table the best you can

	Identify your VELCRO thoughts *(ones that stick that you feel will remain with you longer-term.)*	**Identify your FLAKY thoughts** *(ones that feel unreliable, uncharacteristic of you, and that may potentially appear sooner.)*
What do you notice about the thoughts? Do you see patterns?		
Do you want any Velcro thoughts or no? Do you want any Flaky thoughts to be more consistent in your life or no?		
Write down any potential causes for these thoughts. Take into consideration the reason(s) you categorized your thoughts the way you did.		

Unit 3: Deep Thinking
Chapter 2: Distinguishing the Thoughts of the Destructive Voice
Lesson 1: Overcoming the Destructive Voice Inside

Introduction

The Destructive Voice inserts thoughts in our hearts that take us in wrong directions. No one wants to become a helpless drug addict or live with depression. However, thoughts from the Destructive Voice lead us that way. People might think that every thought they have is helpful and that it is their own desires conjuring them up. However, a destructive force is behind this, planting thoughts in us that are meant for harm. It seeks to bring calamity to our lives by goading us to make unwise choices, both big and small.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Describe the Destructive Voice and how it is the source of conflict within the heart
- explain the method the Destructive Voice uses to convince people to follow its lead

Key Concepts

The Two Wolves Within

There is a popular legend about an old Cherokee grandfather who taught his grandson about life through an example with wolves. It goes somewhat like this:
“A fight is going on inside me,” he said to the boy. “It is a terrible fight, and it is between two wolves. One is evil–he is anger, envy, sorrow, regret, greed, arrogance, self-pity, guilt, resentment, inferiority, lies, false pride, superiority, and ego.” He continued, “The other is good–he is joy, peace, love, hope, serenity, humility, kindness, benevolence, empathy, generosity, truth, compassion, and faith. The same fight is going on inside you and inside every other person, too.”
The grandson thought about it for a minute and then asked his grandfather, “Which wolf will win?” The old Cherokee simply replied, “The one you feed.”
This story holds true in regards to the world of the heart. Although many thinks that they are in command of their minds, we often see obvious cases of when it seems like there are two entities inside of us in conflict, just like the good wolf and evil wolf. We want to work hard to chase our aspirations but then find ourselves with the wrong crowd, going the opposite direction towards failure and ruin. If we had complete control over our hearts, then we could solve the problems in our lives relatively quickly. However, even now, there is a battle going on inside of us.

WEEK 16	Think deeply

DCC WORKSHEET

Course Title:	**IR 1 Mind Education**
Instructor:	***JIN EUN KIM***
Student Name:	
Course:	
Year:	
Date Submitted:	

ASSESSMENT: There are thoughts that we that are actually warring against us. When we believe them, they lead to habits, actions or behaviors that drag us against our will.

Directions: Fill in the box.

Behavior	Engage in self harm in the form of cutting.	Play video games until the early morning every day and have no time to do school work or take care of responsibilities.	Change things about yourself that you like in order to fit in.
How do people think the behavior will help them?			
List some of the consequences of doing it			
How would this behavior be dragging people against their will?			
Knowing the destructive force, what advice would you give to someone whose thoughts are leading them to engage in this behavior?			

Unit 3: Deep Thinking
Chapter 2: Distinguishing the Thoughts of the Destructive Voice
Lesson 2: The Paths of the Destructive Voice Inside

Introduction

The Destructive Voice Is constantly at work. It specializes in planting thoughts that negatively influence our behavior and habits. What might feel like scattered and disorganized ideas are carefully designed by the Destructive Voice to lead us along the wrong path.

Everyone wants to live a good life and they determine themselves 9 chase their dreams and try to accomplish what they want in life. But, often, the Destructive Voice proves too seductive and persuasive. It steers us away from sound decisions and empowers us to the point where we have no choice but to follow.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Identify the five main paths that the Destructive Voice tries to lead people on
- Explain the thoughts that that the Destructive Voice plants inside people when it leads them on these five paths

Key Concepts

The Invisible World of Germs

Many scientists agree that microbiology started when Antoni Van Leeuwenhoek, a Dutch scientist, made the first microscope to see the world of microorganisms in 1674. Although humankind had first discovered the world of microbes, germs' effects were not interesting. Instead, much of science was in a debate about the origin of these newly discovered "little animals." However, medicine was slowly learning that microbes could cause decay and that diseases could spread; these two concepts slowly became connected.

In 1854, John Snow, an English epidemiologist, proposed that cholera, a disease killing many in the Soho district of London, was a waterborne disease caused by one type of germ. Many skeptics challenged his theory. What brought the function of germs to its limelight was the discoveries of French scientist Louis Pasteur. He started to study fermentation and realized that microbes were the entity that caused the process, not chemical reactions, as he first theorized. He soon discovered specific microorganisms that ferment grapes to wine, grains to beer, and others that produce rot. Each set of microorganisms looked different, and he concluded that each caused a different result. His discoveries led to the use of heat to kill harmful bacteria in wine and milk, a process coined after him: "pasteurization."

Before discovering germs, doctors until the 18th century thought that things like a person's habits, state of mind, and even the weather caused disease. However, after Pasteur, people learned how bacteria caused disease and how different bacteria caused different sicknesses. Likewise, the Destructive Voice gives us specific thoughts that lead to certain behaviors and ways of thinking that ruin our lives.

WEEK 16	Think Deeply

DCC WORKSHEET	**Course Title:**	**IR 1 Mind Education**
	Instructor:	***JIN EUN KIM***
	Student Name:	
	Course:	
	Year:	
	Date Submitted:	

ASSESSMENT: Have you ever heard of the term, **"imposter syndrome"**. It refers to feelings of inadequacy, mostly among accomplished people. These destructive thoughts cause our thoughts to sound like this: "You should not have this job, it was just luck that you got it and people are going to find out that you are a fake." "Why are you even on this team? You're going to be on the bench the whole year. The coach made a mistake putting you on this team."

What is interesting is that while the syndrome is called imposter syndrome, you are not the imposter, your destructive thought is the imposter. It sneaks up on you like a burglar, trying to steal the truth. You think your mind is locked; that it has been burglar proofed, but this is not the case.

FBI shows that burglaries occur in the U.S. roughly once every 30 seconds. How can we burglar proof our mental houses?

Take a look at the ways in which people burglar proof their homes. In the column to the right, create a plan for yourself.

Secure your doors and windows	Let's think deeply: How are you securing your doors and windows? _____ _____ How are you blocking thoughts from even coming in? _____ _____ What strategies are you using? List them below. _____ _____

Unit 3: Deep Thinking
Chapter 2: Distinguishing the Thoughts of the Destructive Voice
Lesson 3: Discerning the Thoughts of the Destructive Voice Inside

Introduction

It's hard to find people capable of distinguishing the thoughts of the Destructive Voice from their own thoughts. That's because they blame themselves for their past mistakes. They think that they, themselves, are behind all the spontaneous thoughts of their heart. So, when they make a mistake, they take responsibility for it and try not to repeat it. They attempt to correct themselves, thinking, "I'm not going to do that next time."

If People knew they were deceived by the Destructive Voice, they would not blame themselves. They would feel wronged that the Destructive Voice had gotten the better of them. This realization would stop them from trying to refrain from an action or a decision that is unfruitful. Instead, they would carefully identify the thought that is trying to lead them astray.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Discuss the two challenges of dealing with the Destructive Voice
- Explain how to "search" through our thoughts to discern them
- Learn to utilize deep thinking to refuse the thoughts from the Destructive Voice

Key Concepts

DESALINATION PLANTS

Have you ever heard of desalination? Desalination is the process of turning saltwater into fresh water. Humans have been using distillation, the procedure of using heat to turn water into a gas, to turn seawater into drinkable water for thousands of years. Due to technological developments, giant desalination plants provide fresh water for millions of people in huge metropolises. In countries where there is a general shortage of fresh water, such as the dry states of the Middle East, desalination is the primary source of water for the population.

As one of the largest desalination plants in the U.S., the Claude Lewis Carlsbad Desalination Plant serves San Diego County with 50 million gallons of fresh and drinkable water per day. The plant uses a multi-step process to clean and desalinate the water. First, the water goes through a filter of sand and gravel to get rid of unwanted particles. Then, the filtered water goes through metal vessels that use high pressure to push it through semipermeable membranes. This step is called reverse osmosis, which cleans the water on a molecular level. The leftover salty byproduct, called brine, is returned to the sea white pipelines deliver the newly filtered drinkable water to thousands of people.

It would not be far-reaching to say that the Destructive Voice has "salted" our thoughts with destructive tendencies. It leads us to make decisions that are harmful to us in the long run. The Destructive Voice tells people that they can quit, so it is ok to try some harmful substance. The Destructive Voice puts aggression in our hearts so that we choose violence over discourse. Also, the Destructive Voice places misery in our hearts, so we contemplate ending it all.

WEEK 17	Searching through thoughts

DCC WORKSHEET	**Course Title:**	**IR 1 Mind Education**
	Instructor:	***JIN EUN KIM***
	Student Name:	
	Course:	
	Year:	
	Date Submitted:	
ASSESSMENT: Do you find yourself trying to desperately stop doing something or stopping an action, but falling to do so? That's because we don't often stop reflecting on how that action came to fruition.		

Directions: List three negative thoughts you often have: thoughts that cause you despair, hopelessness and pain. These are thoughts from the Destructive Voice. Keep in mind the thoughts from the Destructive Voice are not true.
Now put the thoughts into box below. What are your new thoughts?

Thoughts that are not useful	Transformed thoughts

Unit 3: Deep Thinking
Chapter 3: Making Deep Thinking a Habit
Lesson 1: Deep Thinking for the Benefit of Others

Introduction
People want to live according to their spontaneous thoughts and gut reactions. However, if we only live according to our ever–changing hearts, we bring many hardships into our lives and the lives around us. As mentioned before, technological innovation has come from deep thinking.
Penicillin and Dunlop tires were two inventions that revolutionized medicine and travel. Both discoveries were not born out of emotions–they came from careful calculation and trial–and–error experimentation. With each iteration, the thinking became deeper and deeper. The absence of deep thinking has led to people committing crimes or making career-ending blunders that they will always regret.

Learning Objectives
LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes
- Learn about the type of deep thinking that benefits those around us
- Contrast the traits of people who think on the first level of thought and those who think on the third level

Key Concepts

The Compassion of Atticus Finch
American author Harper Lee's most recognizable work is her novel, To Kill a Mockingbird, which is a story of a young girl, Scout, growing up in a small town in Alabama, burdened by racial prejudice and social inequality. In contrast to most of the town's residents, Atticus Finch, Scout's lawyer father, displays an admirable character as he agrees to defend Tom Robinson, an African American man falsely accused of sexually assaulting a white woman. Because he took the case, the entire community scorns him. Scout is also mistreated by her classmates, all of whom can't believe that her father would defend Tom.
Although a skilled lawyer. Atticus knows from the very beginning that the entire case is already lost. There is no chance that the prejudiced jury will acquit Tom of the charges. Despite this knowledge of inevitable defeat and the ire directed towards him and his family. Atticus nobly goes to trial and presents a spectacular defense.
Atticus hints at the philosophy of his character when he tells Scout “You never really understand a person until you consider things from his point of view, until you climb into his skin and walk around in it.” This mantra is how Atticus lives his life. His ability to think about the feelings and hearts of others defines his persona. When the poor farmer boy. Walter Cunningham, is invited to lunch. Atticus, the lawyer, speaks to him about details in agriculture, something he can relate to and talk confidently about. When Scout’s childhood friend, Dill, runs away from his abusive parents, Atticus has Scout give him food to recover from his arduous journey. Throughout the book and especially during the tragic climax of the trial of Tom Robinson. Atticus lives with the heart to consider how others feel and think before he makes a decision.

WEEK 17	Searching through thoughts

DCC WORKSHEET	**Course Title:**	**IR 1 Mind Education**
	Instructor:	***JIN EUN KIM***
	Student Name:	
	Course:	
	Year:	
	Date Submitted:	
ASSESSMENT: Deep thinking not only let us exhale and share the issues in our hearts with others, we are able to inhale, meaning we can receive outside advice and help.		

Directions: You will work by pair to interview each other. Each person will share one difficulty they have, and how to manage the difficulty in a healthy way through deep thinking.

What are some difficulties that both of you and your partner have in common?	List them
Think deeply through this difficulty with your partner.	First level of thought
	Second level of thought
	Third level of thought
How do you feel after doing this activity	

Unit 3: Deep Thinking
Chapter 3: Making Deep Thinking a Habit
Lesson 2: Dealing with Pressure from Social Expectations

Introduction

In this world of social expectations and echo chambers, deep thinking is more important than ever. An echo chamber is an environment that only allows opinions, sentiments, and viewpoints that you already agree with, and does not allow for new or different ideas. If we are not careful with the thoughts that stem from social norms, we will soon find ourselves lost in our hearts and on the wrong paths in life. What we should do is objectively identify and view the true source of our thoughts and think through where these thoughts might ultimately take us.

Let's just say we must be ruthless with the bevy of thoughts that enter our minds and hearts. Because it's true, we do have the power to critique our inner monologues and should get in the habit of doing so. Imagine spinning around so many times, not only are we dizzy, right feels Uke left and up feels like down. Going with the flow of society can be dizzying in itself. We must give ourselves the chance to get our bearings when it comes to our thoughts.

Learning Objectives

LO1: Explore how to nurture the heart and manage emotions effectively.
LO3: Engage in self-reflection to assess personal growth and development.
LO4: Cultivate a positive mindset and attitude towards challenges.

Intended Learning Outcomes

- Learn about the type of deep thinking that benefits those around us
- Contrast the traits of people who think on the first level of thought and those who think on the third level

Key Concepts

Different Country. Different Personal Spaces

Do you ever feel awkward when someone enters your personal space? Body language expects have confirmed that while everyone does have a certain amount of air space around their personal space, the standard for personal space is different between cultures. For example, we all have an “intimate zone,” the distance around the body where we only allow our significant others, close friends, and relatives to enter. Researchers have found that in many states in the West, such as the United States, countries in Northern Europe, and Canada, the intimate zone is the space around 18 inches from our bodies.

In Southern Europe and Asia, the intimate zone is only 10 inches from the body. While an Italian may be comfortable conversing to an American a foot away, the American feels like the Italian has “invaded” their personal space. The Italian may innocently want to talk to the American in their 10-inch talking zone. The American is uneasy that the Italian is approaching their 18-inch airspace. A third person viewing the talk from afar would see the Italian pursuing the American around the room as one wants to get into a comfortable conversation zone and the other tries to get out from their intimate zone. This phenomena has been called a “waltz” by witnesses.

Human culture includes social standards. These unseen norms demonstrate how society has improved to accommodate residents. At the grocery store, we naturally wait in line at the checkout. We automatically cover our mouth and nose with a tissue when we sneeze. These rules aid cohabitation. Participants feel fear and pressure from norms. Social pressure and expectations might cause us to make harmful actions that harm ourselves and others.

WEEK 18	Ask yourself

DCC WORKSHEET	**Course Title:**	**IR 1 Mind Education**
	Instructor:	***JIN EUN KIM***
	Student Name:	
	Course:	
	Year:	
	Date Submitted:	

ASSESSMENT: Interrogating our thoughts requires us to observe our thoughts at different angles.

Directions: Ask yourself. And in every question, answer with a minimum of 100 words.

What is the current viral trend that I am interested in? If I follow the trend, are the effects on my life positive or negative?
Who are the people that I want to follow? Do I know them personally? What effect do these people have in my state of being?

If I stay on my current trajectory, will it be harmful or beneficial? What kind of mindset will I develop as a result?
Do I recognize the difference between those who are real friends and those who are virtual/cyber acquiantances?
Which thoughts are causing me anxiety? Where did these thoughts originate from? What happens if I were to acknowledge this thought and follow it?
